## 1. Executive Summary

The Solar and Space Physics communities need a unified data environment to facilitate finding, retrieving, formatting, and obtaining basic information about data essential for their research. With the increasing requirement for data from multiple sources, this need has become acute. A unified method to describe data and other resources is the key to achieving this unified environment. The SPASE (Space Physics Archive Search and Extract) Data Model provides a basic set of terms and values organised in a simple and homogeneous way, to facilitate access to Solar and Space Physics resources. The SPASE Data Model is comparable to the data models developed by the Planetary Data System (PDS) and the International Virtual Observatory Alliance (IVOA) for planetary and astronomical data, respectively. The SPASE Model will provide the detailed information at the parameter level required for Solar and Space Physics applications.

The SPASE consortium is an international team of space and solar physicists and information scientists. It first examined many existing data models, but found none to be adequate. A set of terms based on a half-dozen or so of the most complete of such models was refined based on applying the model at various levels of detail to a large number of existing products to arrive at the current version. The major creators of SPASE-based product descriptions are expected to be domain-based Virtual Observatories ("VxOs"), data centers, and individual data and model providers. The SPASE Data Model will continue to evolve in a controlled way as data and service providers and benefiting researchers suggest improvements to extend its framework of common standards. Success of the model will be measured by the extent of community support and use.

The present Data Model provides enough detail to allow a scientist to understand the content of Data Products (e.g., a set of files for 3 second resolution Geotail magnetic field data for 1992 to 2005), together with essential retrieval and contact information. A typical use would be to have a collection of descriptions stored in one or more related internet-based registries of products; these could be queried with specifically designed search engines which link users to the data they need. The Data Model also provides constructs for describing components of a data delivery system. This includes repositories, registries and services.

This document provides potential users of SPASE with the Data Model for review and use. Sections 2 and 3 provide an overview of the origins and the concepts of the data model. Section 4 presents the set of elements in a hierarchy that shows the natural relationships among them. This is followed by usage suggestion and pedagogic examples in Section 5 and 6, and by the complete set of definitions of terms and enumerated lists in Section 7.

## 2. Introduction

The Space and Solar Physics community is now addressing fundamental questions concerning the plasma and magnetic environment of the Sun, Heliosphere, and planets. We seek to understand everything from "microscopic" phenomena such as magnetic reconnection and turbulent energy dissipation to global issues such as how solar events are related to potentially damaging electric currents and energetic particles in the vicinity of the Earth. Multispacecraft and ground observatory investigations are becoming the norm, but there has been little corresponding unification of data access, formats and tools, resulting in a great deal of time being spent finding, retrieving and reformatting data. The key to reducing this inefficiency is a uniform way to describe adequately what exists. This is the purpose of the SPASE Data Model, which is intended to do for Space and Solar Physics what the Planetary Data System (PDS) is doing for Planetary Science, and what the International Virtual Observatory Alliance (IVOA) is doing for Astronomy and Astrophysics.

Astronomy, Planetary Science, and Space and Solar Physics have developed their data models with different objectives and constraints. Astronomy has objects defined by their direction, and makes much use of standard formats; PDS was developed for long-term archiving; while SPASE is oriented towards data searching and exploitation. PDS often does a better job of describing technical information such as how the data were processed, the form of the data etc., while SPASE includes a better physical description, which facilitates rapid data retrieval and exploitation. Over time, the Astronomy, PDS, and SPASE models may converge. The increasing use of, for example, time series in Astronomy and images in Space Physics may lead to stronger connections between the efforts in these areas. There will also be a need for SPASE to understand Earth Science data models, as Space Weather studies reveal the coupling of the larger plasma environment to terrestrial effects.

### 2.1. What is a data model?

A data model is a set of terms and their relationships that capture the essential concepts of a given domain. The Data Model presented here can be used to describe the scientific relevance of products resulting from observation and modeling in the domain of solar and space physics. These products typically consist of related collections of files that will be accessed, in whole or in part, by science users. Types of products include numerical datasets, display data plots, images, software, documentation, and event lists ("catalogs"). Products are a subset of a larger class of "Resources" that includes Spacecraft, Instruments, Repositories, and even People, that can be described by their own set of terms, and then referred to in product descriptions, rather than being repeatedly described in each product. This data model includes terms relevant to all "Sun-Earth Connection" domains, but it does not try to systematically include Earth Science terms. We also defer to later the question of a uniform description of "service resources" such as web-based format translators or display tools. We initially intend a level of description that will allow a scientist to use the data retrieved, and will add later a set of terms to describe specific access methods for direct data retrieval. At all stages, broad community input and feedback is essential.

### 2.2. What is its use?

The Data Model provides a set of terms that, ideally, can be mapped onto the terms used for specific products, thus providing a uniform means of access and description. The data model is intended to provide the cornerstone of one or more "Virtual Observatories" that will link broad ranges of solar and space physics in a natural way. More specifically, the data model should:

- (1) Provide a way of registering products using a standard set of terms that allow the products to be found with simple searches and described so that users can determine their utility for a specific purpose;
- (2) Allow searching for products containing particular physical quantities (e.g., magnetic field; spectral irradiance) that are variously represented in a diverse array of data products; and
- (3) Create a means of mapping comparable variables from many products onto a common set of terms so that visualization, analysis, and higher-order query tools and services can be used on all of them without regard to the origin of the data.

The accomplishment of these tasks requires "middleware" (either at the provider or in a VxO) that understands product registries and performs the translations needed to map the idiosyncratic product and parameter names of each repository onto the standard terms. This intermediate layer, which can take many forms for different purposes, will provide the links necessary to connect user applications and search-and-retrieval front ends to data repositories. Ultimately, the data environment centered on the data model will involve a number of software tools as well, linked together as internet-based services or other means. Specific software tools and documentation associated with products will be straightforwardly accessible. This "system" has the potential to provide capabilities that can aid even expert users of a particular dataset (e.g., on-the-fly coordinate transformations, the ability to merge datasets from different instruments, easy reference to related indices or other data), in addition to providing the broad access needed to solve global problems in Sun-Earth connection physics. Success will require a concerted cooperative effort across disciplines. Existing efforts in Space and Solar Physics as well as in other areas such as Earth and Planetary Sciences and Astronomy will guide the work.

### **2.3. What process led to the current Data Model?**

The data model presented here has grown from the efforts begun in 2002 that became formalized in regular teleconferences of a group of interested data providers, including scientific and technical representatives of some of the largest data holdings in the US, Europe, and Japan. As the effort to provide seamless access to distributed data proceeded, it became clear that the data model efforts were central. Thus, in March of 2003 a meeting of many of the people in the Contributors list at the beginning of this document was convened to begin the data model construction in earnest. The initial effort involved collecting terms from CDPP, SWRI, NSSDC, ISTP, and other sets to form a starting point. Two years of teleconferences, e-mailed revisions, and occasional face-to-face efforts, along with the application of the terms to specific cases, led to the release of version 1.0 of the data in November 2005. The version of the data model described in this document is an extension of this earlier release.

The general philosophy of the Data Model is to describe products using a natural taxonomy of data sources and of the physical world as represented in actual or potential datasets and models. The resulting Data Model has been put to many tests, but will have to evolve as new products are considered.

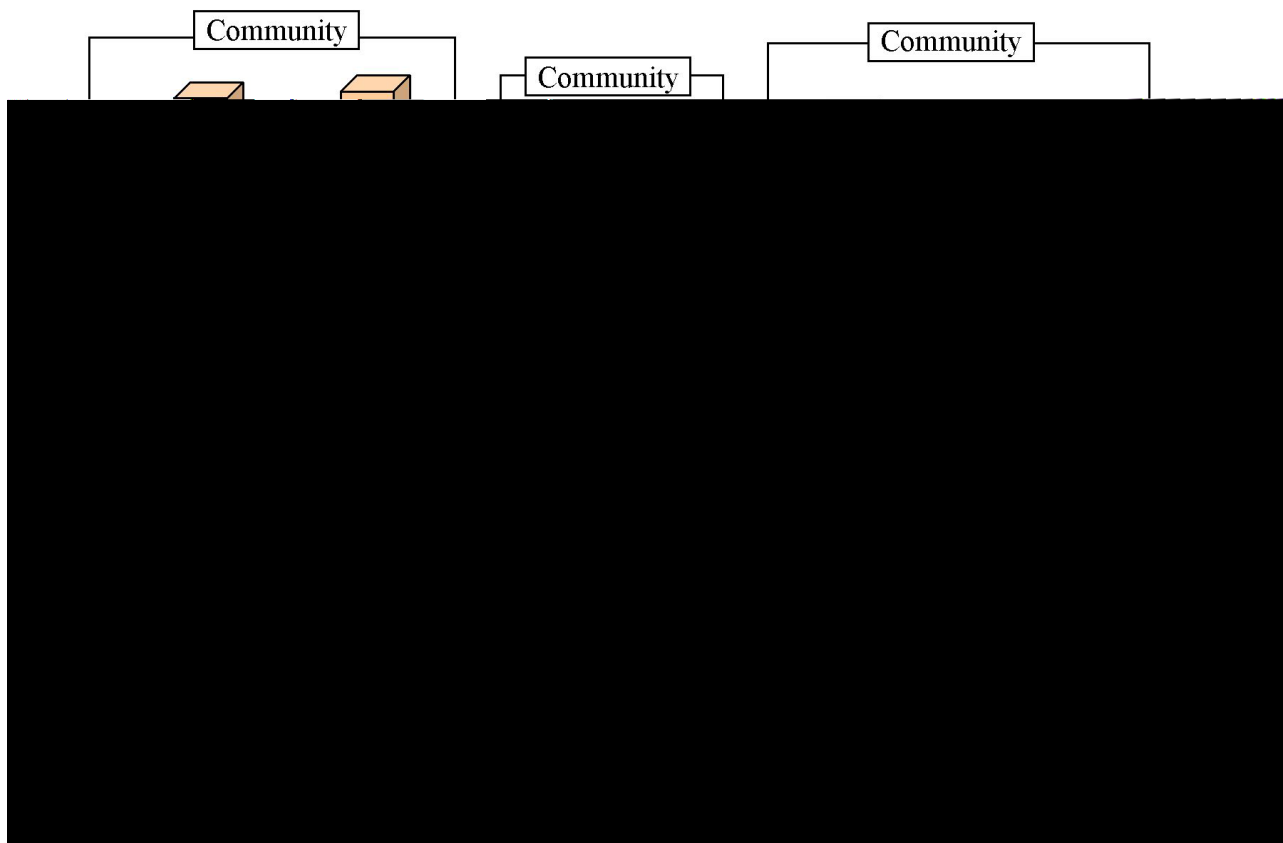

### **2.4. The Data Model in a Virtual Observatory context**

The current conceptual model is intended to serve as the basis for interoperability between independent data systems. It is an attempt to capture the various concepts that are used to represent

the knowledge to be shared in the Space and Solar Physics domains. These concepts are used to convey queries and responses between the user and various remote data systems. Many such systems, in diverse fields, are now functioning or planned. The paradigm for this interoperability is the "Virtual Observatory", originally coined by the astronomical community as a way to allow any researcher, anywhere in the world, to access all known observations of a chosen patch of the sky using the Internet to query repositories of information distributed around the world at data centers and observatories.

The concepts presented in this document are independent of any implementation, but we have in mind a likely map of the eventual data environment. Figure 1 illustrates a possible architecture; the details will depend on the outcome of a number of current efforts and their coordination. The web site <http://lwsde.gsfc.nasa.gov> gives a guide to many currently active projects and a great deal of background information. Of particular interest there is the document entitled, "A Framework for Space and Solar Physics Virtual Observatories."

Figure 1 is very schematic, but the "Access Points" could be discipline specific "VxOs" that aggregate the repositories they serve, making them all appear as one. This is now done by the VSO for solar data. The VSO can then be treated as a repository by other services (VSPO and EGSO currently do this). The "Gateways" in the figure would be places where large numbers of products are registered with pointers to Access Points, Repositories, and other services (not shown) as needed. With the right connections and a common language, the data environment becomes very rich and flexible. Note that more conventional access to any of the Repositories could continue as before.

A prototypical usage scenario is:

1. The scientist uses an application (e.g., a browser or IDL) to define his query in terms of the SPASE model.
2. The application contacts a relevant participating access point or gateway that may generate a response (e.g. URLs of files or services, or metadata about these), or may pass the query to other access points or gateways to obtain further information before responding to the query.
3. The application uses the replies either to present metadata to the user or to request the resource. A request may go directly to a repository or an access point, or may be routed through a gateway for additional services.
4. The requested resources might be processed in various ways at the repository, the access point, the gateway, or by a separate service. For example, the system may assemble a collection of resources, subset the data, generate a graphic, or reformat the resource prior to delivering it to the application.

We envision that different control authorities will maintain different aspects of the Data Model. For example, the list of observatory names is maintained by NSSDC, the definition of prime meridian used in describing local latitude and longitude is set by IAU, and the accepted format for time representation is defined by ISO. There will need to be a community-approved group to be the central authority on the Data Model; SPASE is currently serving as a prototype for this role.

It remains to be determined the extent to which registries of products will be centralized such that one location will contain the latest list obtained from registered data providers. There should be at least one common format for the exchange of product registries and metadata. An XML schema based format will likely provide the preferred method.

### **3. Data Model overview and general concepts**

Special Note: In other data models what SPASE would call "granules" are sometimes referred to as "files" or "products"; and what SPASE refers to as a "product" is sometimes called "datasets".

As mentioned in the introduction, this Data Model focuses on describing Data Products, which are a subset of Resources. In general, each Resource Type consists of a similar collection of things that share a common descriptive hierarchy. Numerical Data and Display Data (pre-rendered Plots and Images based on data) are typically defined as collections of files that differ only in the time of the observations to which they refer. Note that what is delivered to the user may be generated dynamically from underlying files, and thus can be more variable: for a particular product, modes may change with time of observation, and calibrations with time of processing. Thus, in general, the delineation of a product is up to the providers. All of the terms in the Model require a precise definition to be useful, and these are provided in the Dictionary.

The SPASE Data Model describes Data Products by stating what was observed and where and when the data were obtained, as well as giving the source of the observations, and the location (repository), format and other technical aspects of the data. These descriptions are expressed using the appropriate Resource Type from the Data Model.

### 3.1. Resources

At the top level of the present Data Model is the Resource Type. These consist of the Product Types:

Numerical Data,  
Display Data, and  
Catalog

and the Resource Types that support these:

Observatory,  
Instrument,  
Registry,  
Repository,  
Service,  
Granule,  
Person, and  
Extension.

Each of these types has its own set of terms. The present version of the dictionary provides a core set of terms that may be augmented by SPASE in the future. One method of providing external augmentation is through a URL that will provide the user with more information to supplement the metadata.

A set of Elements (the general model term for what could roughly be termed a keyword) is common to all Resource descriptions (with the exception of Granule, Person and Extension); they are grouped in a Resource Header, consisting primarily of:

Resource Name  
Alternate Name  
Release Date  
Description  
Acknowledgement  
Contact  
Information URL  
Association ID

For Data Products, a similar set is grouped as Access Information, which can be replicated with the appropriate changes to describe copies of the product which may differ only in format, encoding or location. The Access Information provides the:

Repository ID  
Availability  
Access Rights  
Access URL  
Caveats  
Format

## Encoding Acknowledgement

These general elements are often free text, although Instrument Name, Format, and various other terms are from well defined enumerated lists. Having enumerated lists will allow searches to be more efficient, so that, for example, a simple query will isolate all registered products from a particular Region without worrying about many more-or- less equivalent terms.

### 3.2. Resource Identifiers

Every resource has a unique identifier so that it can tracked and referenced within a system. This identifier is defined by the authority for the resource. The entity which acts as the authority is determined by agency or group who provides the resource. Each resource identifier is a URI that has the form

scheme://authority/path

where "scheme" is "spase" for those resources administered through the SPASE framework, "authority" is the unique identifier for the name registry within the SPASE framework and "path" is the unique local identifier of the resource within the context of the "authority". The resource ID must be unique within the SPASE framework. This is assured as long as each "authority" is unique and each authority insures that the "path" is unique within its context.

To illustrate the definition of a resource identifier consider that there is a registered "authority" called "nssdc" which maintains information for spacecraft resources. One such spacecraft is GOES-8. Now "nssdc" decides that the "path" to the GOES-8 resource will be "GOES-8". So, the resource identifier would be:

spase://nssdc/GOES-8

It should then be possible in an operating system to provide the resource identifier to a service and that service would return the SPASE description of the resource.

### 3.3. Numerical Data Resources

Since Numerical Data resources are the key to most science investigations, our focus has been on providing a Data Model that will provide users with a means to exploit these data. It will be useful to agree on a uniform means for accessing the data (standard conventions for how to describe file naming and variable access methods), but initially our focus is on the scientific content of the data. We have initial sets of terms for the other Product Types, but these are less detailed; in many cases we expect much less detail will be needed even in the more final form.

The essential information for a Numerical Data resource description consists of what measured it, where to get it, its basic Measurement Type, whom to ask about it, and a few other simple descriptors. Of course, the more detailed the description, the more likely it is that users will understand what a product is and be more able and likely to use it.

Numerical Data resources (called "Datasets" in some systems) are described by the Headers plus

other elements, including:

- Observatory ID (link to Resource description)
- Instrument ID (also a link)
- Measurement Type (the general category, such as Thermal Plasma)
- Temporal Description (time range available, resolution)
- Observed Region (the source of data)
- Physical Parameter (very useful)

Other elements are part of a Numerical Data resource and can be used to provide additional details.

Each Physical Parameter segment of a Product Descriptor is a description of a physical quantity that the provider wishes to advertise in the product. The Product Descriptor could have just one such segment describing image data as being a full-Sun image in white light, or it could contain many segments for the various parameters (density, temperature, velocity, variance in these, error bars, and quality flags) for a thermal plasma product. Each Physical Parameter would be described by a standard set of elements including:

- Name
- Parameter Key
- Description
- Caveats
- Cadence
- Units
- Units Conversion
- Coordinate System
- Dimension
- Measured
- Support

Measured parameters are organized into four categories:

- Photons: which are electromagnetic fields
- Fields: distinguished from Photons by being measured as time series
- Particles: which are forms of matter; and
- Mixed: which are composite or derived quantities.

Support parameters are characterized by its intrinsic type though an enumeration which includes:

- Positional: the location of a observation
- Temporal: the time of a observation
- Other: important, but unclassified parameters

with details of the parameter provided though the Structure information.

Each category has its own set of elements (and enumerated) lists based on the natural taxonomy of

the physical world.

### 3.4. Display Data Resources

Display Data resources are very similar to Numerical Data resource, since they are based on the data, but are preprocessed images in, for example, JPEG, GIF or PNG format that show a picture of a graph or of an object or region. Generally these products will be summaries or browse-level images of data plots, so less detail will be needed in their description. The convention chosen here is that, for example, the FITS file containing the data for a solar H-alpha image is part of a Numerical Data Product, whereas a GIF or JPEG produced from that file, which is more difficult to use for quantitative purposes, is part of a Display Data Product. The Display Data resource can be associated (or coupled) to the Numerical Data resource by assigning the Resource ID of the Numerical Data resource to the Association ID in the Resource Header of Display Data resource.

### 3.5. Catalog Resources

Catalogs can include complete listings of files and the times they cover, but this is not the main intent here. Rather, a Catalog will typically consist of a set of start and stop times for "events" which can be anything from Coronal Mass Ejection occurrences in SOHO images, to intervals when data are available in a particular product, to identifications of when a spacecraft is in a particular region such as the Earth's magnetosheath. These types of catalogs are already being used for assistance in data searches by VSO and EGSO.

Another type of catalog is one that provides summary or statistical information for a Numerical Data resource. In this case the catalog can be associated with the Numerical Data resource by using the Association ID in the Resource Header.

### 3.6. Granules

Granules are a special type of resource which describes a piece of another resource such as a Numerical Data resource or Display Data resource. A Granule must reference which resource it is associated with through its Parent ID element. The Granule inherits all the attributes of the parent resource. A Granule may be composed of one or more physical pieces (files) which are considered inseparable. For example, a data storage format that maintains metadata and binary data in separate, but tightly coupled files. Granules should not be used to group files that have simple relationships or which are associated through a parent resource. For example, each file containing a time interval data for a Numerical Data resource would each be considered a Granule.

### 3.7. Extension

An Extension resource contains other metadata which is not part of the SPASE data model. The contents of this element are defined by individual usage. The organization and content are constrained by the implementation. For example, in an XML representation of the SPASE metadata the content must conform to the XML specifications.

### 3.8. Other Resource Types

The "nonproduct" Resource types are generally self-explanatory. They are:

Instrument: A device which is used to sense and parameterize a physical phenomenon.  
 Observatory: A spacecraft, a cluster of spacecraft, groundbased chains, etc.

Person: An individual human being.

Repository: A storage point for resources

Registry: An inventory of available resources

Service: A location or facility that can perform a well defined task.

### **3.9. Future Direction**

Future versions of the SPASE Data Model will include terms for Software (tools for use of data), Models (physics- and empirically-based predictive schemes, often in the form of programs), Documents (focusing on support documents for other resources rather than on scientific papers) and other resources as the need arises.

### **3.10. General Considerations**

The SPASE Entity-Relationship Tree of Section 3 has been produced from information held in a data base. This database also holds all the element definitions which are explained in Section 5 and tabulated in Section 6. From this database it is also possible to generate an XSD schema, which is the default encoding that has been developed for evaluating the Data Model. Thus, Resources are most naturally described by XML files, but this is not essential. The SPASE Data Model is implementation neutral and can be implemented using other grammars and technologies.

A PDF version of this document can be downloaded from the SPASE site,  
<http://www.spase-group.org/>

#### 4. The Data Model presented hierarchically

The taxonomy tree shows the inter-relationship of elements in the data model. This provides a "big picture" view of the SPASE data model. This taxonomy is implementation neutral. Details for each element are contained in the data dictionary.

Notes: Occurrence specifications are enclosed in parenthesis: 0 = optional, 1 = required, \* = zero or more, + = 1 or more

## 5. Guidelines for Metadata Descriptions of Products

The following sections describe the details of the SPASE Data Model, especially the metadata used to describe data. There is a richness in the available metadata that allows very detailed descriptions of products. Many of the types of metadata may not apply in your case or you may not need much detail to adequately describe your data holdings. But it must be remembered that the better data are described, the easier they will be to use.

To determine what level of detail is needed, we recommend considering not only what the user needs to find the correct data, but also what is needed to know if the data will be useful for the requestor's purpose. The user might get this information by contacting you, but if the data were moved somewhere else and only the data description were available to determine the utility, consider if the user would have sufficient information to know if this is the right data set and what problems might be associated with the use of these data. Documentation may be added as a Resource Type to a future version of the SPASE Data Model, but for now we recommend using "Information URLs," available for each resource, to provide links to more detailed information about data products and their sources.

In summary, products need not be described in minute detail, but users will need, at minimum, information for assessing what the data products represent and where to find them. Of course it is also useful to include information on how the data can be applied and common pitfalls in their use, but the first need is to make the products usefully visible.

## 6. Examples

As an example let us describe a person using SPASE metadata. This person is "John Smith" from Smith Foundation. While the SPASE data model is implementation neutral, XML representation is preferred. This example uses the SPASE XML form.

```
<?xml version="1.0" encoding="UTF-8" ?>
<Spase>
  <Person>
    <ResourceID>spase://person/jsmith@smith.org</ResourceID>
    <PersonName>John Smith</PersonName>
    <OrganizationName>Smith Foundation</OrganizationName>
    <Address>1 Main St., Smithville, MA</Address>
    <Email>jsmith@smith.org</Email>
    <PhoneNumber>1-800-555-1212</PhoneNumber>
  </Person>
</Spase>
```

For a more extensive example let us consider a collection of numerical data from the magnetometer on the ACE spacecraft. This data set has been averaged to 1 minute intervals (cadence) and spans the beginning of the mission to the end of 2004 (1997-09-01 through 2004-12-31). The ACE spacecraft orbits the L1 point between the Earth and the Sun. While the SPASE data model is implementation neutral, XML representation is preferred. This example uses the SPASE XML form. The presented URLs are fictitious and will not direct you to the actual data.

```
<?xml version="1.0" encoding="UTF-8" ?>
<Spase>
  <version>1.1.0</version>
  <NumericalData>
    <ResourceID>spase://UCLA/ACEMAG200301</ResourceID>
    <ReleaseDate>2006-07-26T00:00:00.000</ReleaseDate>
    <ResourceHeader>
      <ResourceName>ACEMAG200301</ResourceName>
      <Acknowledgement>
        User will acknowledge the data producer and instrument P.I. in any
        publication resulting from the use of these data.
      </Acknowledgement>
      <Description>
        ACE MFI 1-minute averaged magnetic-field data in GSE coordinates
        from Jan 2003. These data have been derived from the 16 second
        resolution ACE MFI which were linearly interpolated to a 1-minute
        time grid with time stamps at second zero of each minute.

## 7. Definitions of the Data Model Terms

### How to Read a Definition

Each element has certain attributes and context for use. The details for each element are presented in the following form:

The value associated with an element must be one of the following:

<b>AC-Electric Field</b>	<b>Item</b>
Alternating electric field component of a wave.	
<b>AC-Magnetic Field</b>	<b>Item</b>
Alternating magnetic field component of a wave.	
<b>ASCII</b>	<b>Item</b>
A sequence of characters that adheres to American Standard Code for Information Interchange (ASCII) which is an 7-bit character-coding scheme.	
<b>AVI</b>	<b>Item</b>
Audio Video Interleave (AVI) a digital format for movies that conforms to the Microsoft Windows Resource Interchange File Format (RIFF).	
<b>Absorption</b>	<b>Item</b>
Decrease of radiant energy (relative to the background continuum spectrum).	
<b>Access Information</b>	<b>Container</b>
Attributes of the resource which pertain to how to accessing the resource, availability and storage format.	
Sub-elements:	
Access Rights	
Access URL	
Acknowledgement	
Availability	
Data Extent	
Encoding	
Format	
Repository ID	
<b>Access Rights</b>	<b>Enumeration</b>
Permissions granted or denied by the host of a product to allow other users to access and use the resource.	
Allowed Values:	
Open	
Restricted	
<b>Access URL</b>	<b>Container</b>
Attributes of the method of accessing a resource including a URL, name and description.	
Sub-elements:	
Description	
Language	
Name	
URL	
<b>Acknowledgement</b>	<b>Text</b>
The individual, group or organization which should be acknowledged when the data is used in or contributes to a presentation or publication.	
<b>Active</b>	<b>Item</b>
Exerting an influence or producing a change or effect. An active measurement is one which produces a transmission or excitation as a part of the measurement cycle.	
<b>Active Region</b>	<b>Item</b>
A localized, transient volume of the solar atmosphere in which PLAGEs, SUNSPOTS, FACULAE, FLAREs, etc. may be observed.	
<b>Activity Index</b>	<b>Item</b>
An indication, derived from one or more measurements, of the level of activity of an object or region, such as sunspot number, F10.7 flux, Dst, or the Polar Cap Indices.	

Address	Text
Directions for finding some location; written on letters or packages that are to be delivered to that location.	
Aerosol	Item
A suspension of fine solid or liquid particles in a gas.	
Alfven Mach Number	Item
The ratio of the bulk flow speed to the Alfven speed.	
Alfven Velocity	Item
Phase velocity of the Alfven wave; In SI units it is the velocity of the magnetic field divided by the square root of the mass density times the permeability of free space ( $\mu$ ).	
Alpha Particle	Item
A positively charged nuclear particle that consists of two protons and two neutrons.	
Alternate Name	Text
An alternative or shortened name used to refer to a resource. This includes acronyms, expanded names or a synonym for a resource.	
Ancillary	Item
A complementary item which can be subordinate, subsidiary, auxiliary, supplementary to the primary item.	
Anisotropy	Item
Direction-dependent property.	
Annotation	Container
Information which is explanatory or descriptive which is associated with another resource.	
Sub-elements:	
Annotation Type Confidence Rating Extension Image URL Phenomenon Type Resource Header Resource ID Time Span	
Annotation Type	Enumeration
A classification for an annotation.	
Allowed Values:	
Anomaly Event Feature	
Anomaly	Item
An interval where measurements or observations may be adversely affected.	
Antenna	Item
A sensor used to measure electric potential.	
Archive Specialist	Item
An individual who is an expert on a collection of resources and may also be knowledgeable of the phenomenon and related physics represented by the resources. This includes librarians, curators, archive scientists and other experts.	
Association	Container
Attributes of a relationship a resource has with another resource.	

## Sub-elements:

Association ID  
 Association Type  
 Note

Association ID	Text
----------------	------

The resource identifier for a resource with which this resource is closely associated.

Association Type	Enumeration
------------------	-------------

A characterization of the role or purpose of an associated resource.

## Allowed Values:

Derived From  
 Other  
 Part Of  
 Revision Of

Asteroid	Item
----------	------

A small extraterrestrial body consisting mostly of rock and metal that is in orbit around the sun.

Atmosphere	Item
------------	------

The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.

Atomic Number	Numeric
---------------	---------

The number of protons in the nucleus of an atom.

Aurora	Item
--------	------

An atmospheric phenomenon consisting of bands of light caused by charged solar particles following the earth's magnetic lines of force.

Auroral Region	Item
----------------	------

The region in the atmospheric where electrically-charged particles bombarding the upper atmosphere of a planet in the presence of a magnetic field produce an optical phenomenon.

Availability	Enumeration
--------------	-------------

An indication of the method or service which may be used to access the resource.

## Allowed Values:

Offline  
 Online

Average	Item
---------	------

The statistical mean; the sum of a set of values divided by the number of values in the set.

Average Charge State	Item
----------------------	------

A measure of the composite deficit (positive) or excess (negative) of electrons with respect to protons.

Axis Label	Text
------------	------

A short character string (approximately 10 characters, but preferably 6 characters - more only if absolutely required for clarity) which can be used to label a y-axis for a plot or to provide a heading for a data listing.

Azimuth Angle	Item
---------------	------

The angle between the projection into the i-j plane of a position or measured vector and the i-axis of the coordinate system. Mathematically defined as  $\arctan(j/i)$ .

Azimuthal Angle Range	Container
-----------------------	-----------

The range of possible azimuthal angles for a group of energy observations. Default units are degrees.

## Sub-elements:

Bin  
High  
Low  
Units

<b>BZIP2</b>	Item
An open standard algorithm by Julian Seward using Burrows-Wheeler block sorting and Huffman coding. See < <a href="http://www.bzip.org/">http://www.bzip.org/</a> >	
<b>Band Name</b>	Text
A common or provider assigned name for a range of values.	
<b>Base64</b>	Item
A data encoding scheme whereby binary-encoded data is converted to printable ASCII characters. It is defined as a MIME content transfer encoding for use in Internet e-mail. The only characters used are the upper- and lower-case Roman alphabet characters (A–Z, a–z), the numerals (0–9), and the "+" and "/" symbols, with the "=" symbol as a special suffix (padding) code.	
<b>Bin</b>	Container
A grouping of observations according to a band or window of a common attribute.	
Sub-elements:	
Band Name	
High	
Low	
<b>Binary</b>	Item
A direct representation of the bits which may be stored in memory on a computer.	
<b>Bow Shock Crossing</b>	Item
A crossing of the boundary between the undisturbed (except for foreshock effects) solar wind and the shocked, decelerated solar wind of the magnetosheath.	
<b>Browse</b>	Item
A representation of an image which is suitable to reveal most or all of the details of the image.	
<b>CDF</b>	Item
Common Data Format (CDF). A binary storage format developed at Goddard Space Flight Center (GSFC).	
<b>CEF</b>	Item
Cluster Exchange Format (CEF) is a self-documenting ASCII format designed for the exchange of data. There are two versions of CEF which are not totally compatible.	
<b>CEF 1</b>	Item
Cluster Exchange Format (CEF), version 1, is a self-documenting ASCII format designed for the exchange of data. The metadata contains information compatible with the ISTP recommendations for CDF.	
<b>CEF 2</b>	Item
Cluster Exchange Format (CEF), version 2, is a self-documenting ASCII format designed for the exchange of data and introduced for Cluster Active Archive. Compared to version 1, the metadata description of vectors and tensors is different.	
<b>CGM</b>	Item
Corrected Geomagnetic - A coordinate system from a spatial point with GEO radial distance and geomagnetic latitude and longitude, follow the epoch-appropriate IGRF/DGRF model field vector through to the point where the field line crosses the geomagnetic dipole equatorial plane. Then trace the dipole magnetic field vector Earthward from that point on the equatorial plane, in the same hemisphere as the original point, until the initial radial distance is reached. Designate the dipole latitude and longitude at that point as the CGM latitude and longitude of	

the original point. See <[http://nssdc.gsfc.nasa.gov/space/cgm/cgmm\\_des.html](http://nssdc.gsfc.nasa.gov/space/cgm/cgmm_des.html)>

<b>Ca-K</b>	<b>Item</b>
A spectrum with a wavelength of range centered near 393.5 nm. VSO nickname: Ca-K image with range of 391.9 nm to 395.2 nm.	
<b>Cadence</b>	<b>Duration</b>
The time interval between the start of successive measurements.	
<b>Calibrated</b>	<b>Item</b>
Data wherein sensor outputs have been convolved with instrument response function, often irreversibly, to yield data in physical units.	
<b>Carrington</b>	<b>Item</b>
A coordinate system which is centered at the Sun and is "fixed" with respect to the synodic rotation rate; the mean synodic value is about 27.2753 days. The Astronomical Almanac gives a value for Carrington longitude of 349.03 degrees at 0000 UT on 1 January 1995.	
<b>Cartesian</b>	<b>Item</b>
A representation in which a position vector or a measured vector (e.g., field or flow) is specified by its components along the base axes of the coordinate system.	
<b>Catalog</b>	<b>Container</b>
A tabular listing of events or observational notes, especially those that have utility in aiding a user in locating data. Catalogues include lists of events, files in a product, and data availability. Sub-elements:	
<ul style="list-style-type: none"> <li>Access Information</li> <li>Caveats</li> <li>Extension</li> <li>Input Resource ID</li> <li>Instrument ID</li> <li>Keyword</li> <li>Parameter</li> <li>Phenomenon Type</li> <li>Provider Resource Name</li> <li>Provider Version</li> <li>Resource Header</li> <li>Resource ID</li> <li>Time Span</li> </ul>	
<b>Caveats</b>	<b>Text</b>
Information which may be important in the avoidance of the misuse of the resource, for instance instrument maladies, corruption or contamination.	
<b>Channeltron</b>	<b>Item</b>
An instrument that detects electrons, ions, and UV-radiation, according to the principle of a secondary emission multiplier. It is typically used in electron spectroscopy and mass spectrometry.	
<b>Characteristic</b>	<b>Item</b>
A quantity which can be easily identified and measured in a given environment.	
<b>Checksum</b>	<b>Container</b>
A computed value that is dependent upon the contents of a digital data object. Primarily used to check whether errors or alterations have occurred during the transmission or storage of a data object. Sub-elements:	
<ul style="list-style-type: none"> <li>Hash Function</li> <li>Hash Value</li> </ul>	
<b>Chromosphere</b>	<b>Item</b>

The region of the Sun's (or a star's) atmosphere above the temperature minimum and below the Transition Region. The solar chromosphere is approximately 400 km to 2100 km above the photosphere, and characterized by temperatures from 4500 - 28000 K.

<b>Circular</b>	<b>Item</b>
Relative to polarization, right-hand circularly polarized light is defined such that the electric field is rotating clockwise as seen by an observer towards whom the wave is moving. Left-hand circularly polarized light is defined such that the electric field is rotating counterclockwise as seen by an observer towards whom the wave is moving. The polarization of magnetohydrodynamic waves is specified with respect to the ambient mean magnetic field : right-hand polarized waves have a transverse electric field component which turns in a right-handed sense (that of the gyrating electrons) around the magnetic field.	
<b>Co-Investigator</b>	<b>Item</b>
An individual who is a scientific peer and major participant in an investigation.	
<b>Column</b>	<b>Item</b>
A two-dimensional measure of a quantity. The column is the area over which the quantity is measured.	
<b>Comet</b>	<b>Item</b>
A relatively small extraterrestrial body consisting of a frozen mass that travels around the sun in a highly elliptical orbit.	
<b>Component</b>	<b>Enumeration</b>
Projection of a vector along one of the base axes of a coordinate system. Allowed Values: I J K	
<b>Confidence Rating</b>	<b>Enumeration</b>
A classification of the certainty of an assertion. Allowed Values: Good Probable Strong	
<b>Contact</b>	<b>Container</b>
The person or organization who may be able to provide special assistance or serve as a channel for communication for additional information about a resource. Sub-elements: Person ID Role	
<b>Contributor</b>	<b>Item</b>
An entity responsible for making contributions to the content of the resource.	
<b>Coordinate Representation</b>	<b>Enumeration</b>
The method or form for specifying a given point or vector in a given coordinate system. Allowed Values: Cartesian Cylindrical Spherical	
<b>Coordinate System</b>	<b>Container</b>
Specification of the origin and orientation of a set of typically orthogonal axes. Sub-elements: Coordinate Representation Coordinate System Name	

Coordinate System Name	Enumeration
Identifies the coordinate system in which the position, direction or observation has been expressed. Allowed Values:	
CGM	
Carrington	
DM	
GEI	
GEO	
GSE	
GSEQ	
GSM	
HAE	
HCI	
HEE	
HEEQ	
HG	
HGI	
J2000	
LGM	
MAG	
MFA	
RTN	
SC	
SE	
SM	
SR	
SR2	
SSE	
Spacecraft Orbit Plane	
WGS84	
Corona	Item
The outermost atmospheric region of the Sun or a star, characterized by ionization temperatures above $10^5$ K. The solar corona starts at about 2100 km above the photosphere; there is no generally defined upper limit.	
Coronal Hole	Item
An extended region of the corona, exceptionally low in density and associated with unipolar photospheric regions. A coronal hole can be an "open" magnetic field in the corona and (perhaps) inner heliosphere which has a faster than average outflow (wind); A region of lower than "quiet" ion and electron density in the corona; or a region of lower peak electron temperature in the corona than in the "quiet" corona.	
Coronal Mass Ejection	Item
A solar event which involves a burst of plasma which is ejected from the Sun into the interplanetary medium.	
Coronagraph	Item
An instrument which can image things very close to the Sun by using a disk to block the Sun's bright surface which reveals the faint solar corona and other celestial objects.	
Count Rate	Item
The number of events per unit time.	
Counts	Item
An enumeration of the number of detection events occurring in a particle detector per unit time or over detector accumulation times.	
Cross Spectrum	Item
The Fourier transform of the cross correlation of two physical or empirical observations.	

<b>Current</b>	<b>Item</b>
The flow of electrons through a conductor caused by a potential difference.	
<b>Cylindrical</b>	<b>Item</b>
A coordinate representation of a position vector or measured vector (field or flow) by its k-component, the magnitude of its projection into the i-j plane, and the azimuthal angle of the i-j plane projection.	
<b>D-Region</b>	<b>Item</b>
The layer of the ionosphere that exists approximately 50 to 95 km above the surface of the Earth. One of several layers in the ionosphere.	
<b>DM</b>	<b>Item</b>
Dipole Meridian - A coordinate system centered at the observation point. Z axis is parallel to the Earth's dipole axis, positive northward. X is in the plane defined by Z and the line linking the observation point with the Earth's center. Y is positive eastward. See <a href="http://cdpp.cnes.fr/00428.pdf">&lt;http://cdpp.cnes.fr/00428.pdf&gt;</a>	
<b>Data</b>	<b>Item</b>
A collection of organized information, usually the results of experience, observation or experiment, or a set of premises. This may consist of numbers, words, or images, particularly as measurements or observations of a set of variables.	
<b>Data Extent</b>	<b>Container</b>
The area of storage in a file system required to store the contents of a resource. The data extent is expressed in unitized bytes.	
Sub-elements:	
Per Quantity Units	
<b>Data Producer</b>	<b>Item</b>
An individual who generated the resource and is familiar with its provenance.	
<b>Deputy-PI</b>	<b>Item</b>
An individual who is an administrative or scientific leader for an investigation operating under the supervision of a Principal Investigator.	
<b>Derived From</b>	<b>Item</b>
A transformed or altered version of a resource instance.	
<b>Description</b>	<b>Text</b>
A narrative explanation with detail appropriate for the item it describes. For example a description of data resource should include discussions of the main quantities in the resource, possible uses and search terms. A description should also include whether any corrections (i.e, geometry, inertial) have been applied to the resource.	
<b>Deviation</b>	<b>Item</b>
The difference between an observed value and the expected value of a quantity.	
<b>Differential</b>	<b>Item</b>
A flux measurement within a given energy and solid-angle range.	
<b>Direction</b>	<b>Item</b>
The spatial relation between an object and another object, the orientation of the object or the course along which the object points or moves.	
<b>Direction Angle</b>	<b>Enumeration</b>
The angle between a position vector or measured vector (or one of its projections onto a plane) and one of the base axes of the coordinate system.	

## Allowed Values:

Azimuth Angle  
Elevation Angle  
Polar Angle

Display Cadence	Duration
-----------------	----------

The time interval between the successive display elements.

Display Data	Container
--------------	-----------

A graphical representation of data wherein the underlying numeric values are not (readily) accessible for analysis.. Examples are line plots and spectrograms.

## Sub-elements:

Access Information  
Caveats  
Display Cadence  
Extension  
Input Resource ID  
Instrument ID  
Keyword  
Measurement Type  
Observed Region  
Parameter  
Processing Level  
Provider Processing Level  
Provider Resource Name  
Provider Version  
Resource Header  
Resource ID  
Spectral Range  
Temporal Description

Display Type	Enumeration
--------------	-------------

The general styling or type of plot that is suitable for the variable.

## Allowed Values:

Image  
Plasmagram  
Spectrogram  
Stack Plot  
Time Series  
Wave Form

Document	Container
----------	-----------

A set of information designed and presented as an individual entity. A document may contain plain or formatted text, in-line graphics, sound, other multimedia data, or hypermedia references. Some examples of documents include a paper, letter, book, user guide, map, drawing, photograph, or image.

## Sub-elements:

Access Information  
Document Type  
Input Resource ID  
Keyword  
Resource Header  
Resource ID

Document Type	Enumeration
---------------	-------------

A characterization of the content or purpose of a document.

## Allowed Values:

Paper

Doppler Frequency	Item
-------------------	------

Change in the frequency of a propagating wave due to motion of the source, the observer, the reflector, or the propagation medium.

Dopplergram	Item
A map or image depicting the spatial distribution of line-of-sight velocities of the observed object.	
Double Sphere	Item
A dipole antenna of which the active (sensor) elements are small spheres located at the ends of two wires deployed in the equatorial plane, on opposite sides of a spinning spacecraft.	
Dust	Item
Free microscopic particles of solid material.	
Dust Detector	Item
An instrument which determines the mass and speed of ambient dust particles.	
E-Region	Item
A layer of ionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the The Kennelly-Heaviside layer.	
EIT Wave	Item
A wave in the corona of the Sun which produce shock waves on the Sun's chromosphere (Moreton Waves). EIT Waves are produced by large solar flare and expand outward at about 1,000 km/s. It usually appears as a slowly moving diffuse arc of brightening in H-alpha, and may travel for several hundred thousand km.	
Earth	Enumeration
The third planet from the sun in our solar system.	
Allowed Values:	
Magnetosheath	
Magnetosphere	
Magnetosphere.Magnetotail	
Magnetosphere.Main	
Magnetosphere.Polar	
Magnetosphere.Radiation Belt	
Near Surface	
Near Surface.Atmosphere	
Near Surface.Auroral Region	
Near Surface.Equatorial Region	
Near Surface.Ionosphere	
Near Surface.Ionosphere.D-Region	
Near Surface.Ionosphere.E-Region	
Near Surface.Ionosphere.F-Region	
Near Surface.Ionosphere.Topside	
Near Surface.Mesosphere	
Near Surface.Plasmasphere	
Near Surface.Polar Cap	
Near Surface.South Atlantic Anomaly Region	
Near Surface.Stratosphere	
Near Surface.Thermosphere	
Near Surface.Troposphere	
Surface	
Electric	Item
The physical attribute that exerts an electrical force.	
Electric Field	Item
A region of space around a charged particle, or between two voltages within which a force is exerted on charged objects in its vicinity. An electric field is the electric force per unit charge.	
Electromagnetic	Item
Electric and magnetic field variations in time and space that propagate through a medium or a vacuum with the wave's propagation, electric field, and magnetic field vectors forming an	

orthogonal triad. Waves in this category are detected by having their field quantities measured.

<b>Electron</b>	<b>Item</b>
-----------------	-------------

An elementary particle consisting of a charge of negative electricity equal to about  $1.602 \times 10^{*-19}$  Coulomb and having a mass when at rest of about  $9.109534 \times 10^{*-28}$  gram.

<b>Electron Drift Instrument</b>	<b>Item</b>
----------------------------------	-------------

An active experiment to measure the electron drift velocity based on sensing the displacement of a weak beam of electrons after one gyration in the ambient magnetic field.

<b>Electrostatic</b>	<b>Item</b>
----------------------	-------------

Collective longitudinal electric-field and plasma oscillations trapped within a body of plasma.

<b>Electrostatic Analyser</b>	<b>Item</b>
-------------------------------	-------------

An instrument which uses charged plates to analyze the mass, charge and kinetic energies of charged particles which enter the instrument.

<b>Element</b>	<b>Container</b>
----------------	------------------

A component or individual unit of a multiple value quantity such as an array or vector.

Sub-elements:

- Component
- Fill Value
- Index
- Name
- Parameter Key
- Units
- Units Conversion
- Valid Max
- Valid Min

<b>Elevation</b>	<b>Numeric</b>
------------------	----------------

The distance in meters above (positive) or below (negative) the "zero elevation" defined by the World Geodetic System reference frame (WGS84).

<b>Elevation Angle</b>	<b>Item</b>
------------------------	-------------

The angle between the position or measured vector and the i-j plane of the coordinate system. Mathematically defined as  $\arctan(k/\sqrt{i^2+j^2})$ .

<b>Email</b>	<b>Text</b>
--------------	-------------

The electronic address at which the individual may be contacted expressed in the form "local-part@domain".

<b>Emissivity</b>	<b>Item</b>
-------------------	-------------

The energy emitted spontaneously per unit bandwidth (typically frequency) per unit time per unit mass of source. Emissivity is usually integrated over all directions/solid angles.

<b>Encoding</b>	<b>Enumeration</b>
-----------------	--------------------

A set of unambiguous rules that establishes the representation of information within a file.

Allowed Values:

- ASCII
- BZIP2
- Base64
- GZIP
- None
- TAR
- Unicode
- ZIP

<b>Energetic Particle Instrument</b>	<b>Item</b>
--------------------------------------	-------------

An instrument that measures fluxes of charged particles as a function of time, direction of motion, mass, charge and/or species.

<b>Energetic Particles</b>	<b>Item</b>
Pieces of matter that are moving very fast. Energetic particles include protons, electrons, neutrons, neutrinos, the nuclei of atoms, and other sub-atomic particles.	
<b>Energetic Solar Particle Event</b>	<b>Item</b>
An enhancement of interplanetary fluxes of energetic ions accelerated by interplanetary shocks and/or solar flares.	
<b>Energy</b>	<b>Item</b>
The capacity for doing work as measured by the capability of doing work (potential energy) or the conversion of this capability to motion (kinetic energy)	
<b>Energy Density</b>	<b>Item</b>
The amount of energy per unit volume.	
<b>Energy Flux</b>	<b>Item</b>
The amount of energy passing through a unit area in a unit time.	
<b>Energy Range</b>	<b>Container</b>
The minimum and maximum energy values of the particles represented by a given "physical parameter" description.	
Sub-elements:	
Bin	
High	
Low	
Spectral Range	
Units	
<b>Ephemeris</b>	<b>Item</b>
The spatial coordinates of a body as a function of time. When used as an Instrument Type it represents the process or methods used to generate spatial coordinates.	
<b>Equatorial Region</b>	<b>Item</b>
A region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.	
<b>Equivalent Width</b>	<b>Item</b>
The spectral width of a total absorption line having the amount of absorbed radiant energy being equivalent to that in an observed absorption line.	
<b>Event</b>	<b>Item</b>
An action or observation which occurs at a point in time.	
<b>Expiration Date</b>	<b>DateTime</b>
The date and time when a resource is no longer available. If the Expiration Date is specified then it indicates that resource should not be made available after that time. However, this is only advisory and in practice a resource description should be unpublished to eliminate access to a resource.	
<b>Exposure</b>	<b>Duration</b>
The time interval over which an individual measurement is taken.	
<b>Extension</b>	<b>Text</b>
A container of other metadata which is not part of the SPASE data model. The contents of this element are defined by individual usage. The organization and content are constrained by the implementation. For example, in an XML representation of the SPASE metadata the content must conform to the XML specifications.	
<b>Extreme Ultraviolet</b>	<b>Item</b>
A spectrum with a wavelength range of 10.0 nm to 125.0nm. VSO nickname: EUV image with	

a range of of 10.0 nm to 125.0 nm

<b>F-Region</b>	<b>Item</b>
A layer that contains ionized gases at a height of around 150–800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.	
<b>FITS</b>	<b>Item</b>
Flexible Image Transport System (FITS) is a digital format primarily designed to store scientific data sets consisting of multi-dimensional arrays (1-D spectra, 2-D images or 3-D data cubes) and 2-dimensional tables containing rows and columns of data.	
<b>Far Ultraviolet</b>	<b>Item</b>
A spectrum with a wavelength range of 122 nm to 200.0nm. VSO nickname: FUV image with a range of 122.0 nm to 200 nm	
<b>Faraday Cup</b>	<b>Item</b>
An instrument consisting of an electrode from which electrical current is measured while a charged particle beam (electrons or ions) impinges on it. Used to determine energy spectrum and sometimes ion composition of the impinging particles.	
<b>Fax Number</b>	<b>Text</b>
The symbols and numerals required to send a facsimile (FAX) to an individual by telephone. The string may contain punctuation marks such as dash (-) or dot (.) to separate fields within the string.	
<b>Feature</b>	<b>Item</b>
A prominent or distinctive characteristic that occurs at a location or persists over a period of time.	
<b>Field</b>	<b>Container</b>
The space around a radiating body within which its electromagnetic attributes can exert force on another similar body that is not in direct contact.	
Sub-elements:	
Field Quantity	
Frequency Range	
Qualifier	
<b>Field Quantity</b>	<b>Enumeration</b>
The physical attribute of the field.	
Allowed Values:	
Current	
Electric	
Electromagnetic	
Gyrofrequency	
Magnetic	
Plasma Frequency	
Potential	
Poynting Flux	
<b>Fill Value</b>	<b>Text</b>
A value that indicates that a quantity is undefined.	
<b>Fit</b>	<b>Item</b>
Values that make an model agree with the data.	
<b>Flow Speed</b>	<b>Item</b>
The rate at which particles or energy is passing through a unit area in a unit time.	
<b>Flow Velocity</b>	<b>Item</b>

The volume of matter passing through a unit area perpendicular to the direction of flow in a unit of time.

Flux Feedback	Item
---------------	------

A search coil whose bandwidth and signal/noise ratio are increased by the application of negative feedback at the sensor (flux) level by driving a collocated coil with a signal from the preamplifier.

Forbush Decrease	Item
------------------	------

A rapid decrease in the observed galactic cosmic ray intensity following the passage of an outwardly convecting interplanetary magnetic field disturbance, such as those associated with large CME's, that sweep some galactic cosmic rays away from Earth.

Format	Enumeration
--------	-------------

The organization of data according to preset specifications. The value is selected from a list of accepted names for known, well documented formats.

Allowed Values:

AVI  
 Binary  
 CDF  
 CEF  
 CEF 1  
 CEF 2  
 FITS  
 GIF  
 HDF  
 HDF 4  
 HDF 5

Fourier Transform Spectrograph	Item
--------------------------------	------

An instrument that determines the spectra of a radiative source, using time-domain measurements and a Fourier transform.

Frequency	Item
-----------	------

The number of occurrences of a repeating event per unit time.

Frequency Range	Container
-----------------	-----------

The range of possible values for the observed frequency.

Sub-elements:

Bin  
 High

Low  
Spectral Range  
Units

<b>GEI</b>	<b>Item</b>
Geocentric Equatorial Inertial - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis points towards the first point of Aries (from the Earth towards the Sun at the vernal equinox). See Russell, 1971	
<b>GEO</b>	<b>Item</b>
Geographic - geocentric corotating - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis lies in Greenwich meridian, positive towards Greenwich. See Russell, 1971.	
<b>GIF</b>	<b>Item</b>
Graphic Interchange Format (GIF) first introduced in 1987 by CompuServe. GIF uses LZW compression and images are limited to 256 colours.	
<b>GSE</b>	<b>Item</b>
Geocentric Solar Ecliptic - A coordinate system where the X axis is from Earth to Sun. Z axis is normal to the ecliptic, positive northward. See Russell, 1971.	
<b>GSEQ</b>	<b>Item</b>
Geocentric Solar Equatorial - A coordinate system where the X axis is from Earth to Sun. Y axis is parallel to solar equatorial plane. Z axis is positive northward. See Russell, 1971	
<b>GSM</b>	<b>Item</b>
Geocentric Solar Magnetospheric - A coordinate system where the X axis is from Earth to Sun, Z axis is northward in a plane containing the X axis and the geomagnetic dipole axis. See Russell, 1971	
<b>GZIP</b>	<b>Item</b>
An open standard algorithm distributed by GHU based on LZ77 and Huffman coding. See < <a href="http://www.gnu.org/software/gzip/gzip.html">http://www.gnu.org/software/gzip/gzip.html</a> > or < <a href="http://www.gzip.org/">http://www.gzip.org/</a> >	
<b>Gamma Rays</b>	<b>Item</b>
Photons with a wavelength range: 0.00001 to 0.001 nm	
<b>Geiger-Mueller Tube</b>	<b>Item</b>
An instrument which measures density of ionizing radiation based on interactions with a gas.	
<b>General Contact</b>	<b>Item</b>
An individual who can provide information on a range of subjects or who can direct you to a domain expert.	
<b>Geomagnetic Storm</b>	<b>Item</b>
A magnetospheric disturbance typically defined by variations in the horizontal component of the Earth's surface magnetic field. The variation typically starts with a field enhancement associated with a solar wind pressure pulse and continues with a field depression associated with an enhancement of the diamagnetic magnetospheric ring current.	
<b>Good</b>	<b>Item</b>
Very likely given the available evidence.	
<b>Granule</b>	<b>Container</b>
An accessible portion of another resource. A Granule may be composed of one or more physical pieces (files) which are considered inseparable. For example, a data storage format that maintains metadata and binary data in separate, but tightly coupled files. Granules should not be used to group files that have simple relationships or which are associated through a parent resource. For example, each file containing a time interval data for a Numerical Data resource	

would each be considered a Granule. The ParentID of a Granule resource must be a NumericalData resource. The attributes of a Granule supersede the corresponding attributes in the NumericalData resource.

Sub-elements:

Expiration Date  
Parent ID  
Prior ID  
Release Date  
Resource ID  
Source  
Start Date  
Stop Date

<b>Gyrofrequency</b>	<u>Item</u>
The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.	
<b>H-alpha</b>	<u>Item</u>
A spectrum with a wavelength range centered at 656.3 nm. VSO nickname: H-alpha image with a spectrum range of of 655.8 nm to 656.8 nm.	
<b>HAE</b>	<u>Item</u>
Heliocentric Aries Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as SE below. See Hapgood, 1992.	
<b>HCI</b>	<u>Item</u>
Heliographic Carrington Inertial.	
<b>HDF</b>	<u>Item</u>
Hierarchical Data Format	
<b>HDF 4</b>	<u>Item</u>
Hierarchical Data Format, Version 4	
<b>HDF 5</b>	<u>Item</u>
Hierarchical Data Format, Version 5	
<b>HEE</b>	<u>Item</u>
Heliocentric Earth Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis points from Sun to Earth. See Hapgood, 1992	
<b>HEEQ</b>	<u>Item</u>
Heliocentric Earth Equatorial - A coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is generally Earthward in the plane defined by the Z axis and the Sun-Earth direction. See Hapgood, 1992.	
<b>HG</b>	<u>Item</u>
Heliographic - A heliocentric rotating coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X, Y axes rotate with a 25.38 day period. The zero longitude (X axis) is defined as the longitude that passed through the ascending node of the solar equator on the ecliptic plane on 1 January, 1854 at 12 UT. See < <a href="http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html</a> >	
<b>HGI</b>	<u>Item</u>
Heliographic Inertial - A heliocentric coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is along the intersection line between solar equatorial and ecliptic planes. The X axis was positive at SE longitude of 74.367 deg on Jan 1, 1900. (See SE below.) See < <a href="http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html</a> >	
<b>HTML</b>	<u>Item</u>

A text file containing structured information represented in the HyperText Mark-up Language (HTML). See <<http://www.w3.org/MarkUp/>>

<b>Hard X-rays</b>	<b>Item</b>
Photons with a wavelength range: 0.001 to 0.1 nm and an energy range of 12 keV to 120 keV	
<b>Hash Function</b>	<b>Enumeration</b>
A function or algorithm that converts a digital data object into a hash value. Typically the hash value is small and concise when compared to the digital data object.	
Allowed Values:	
MD5	
SHA1	
SHA256	
<b>Hash Value</b>	<b>Text</b>
The value calculated by a hash function, e.g. the message digest of a digital data object.	
<b>He-10830</b>	<b>Item</b>
A spectrum with a wavelength range centered at 1082.9 nm. VSO nickname: He 10830 image with a range of 1082.5 nm to 1083.3 nm.	
<b>He-304</b>	<b>Item</b>
A spectrum centered around the resonance line of ionised helium at 304 Angstrom (30.4 nm).	
<b>Heat Flux</b>	<b>Item</b>
Flow of thermal energy through a gas or plasma; typically computed as third moment of a distribution function.	
<b>Heliosphere</b>	<b>Enumeration</b>
The solar atmosphere extending roughly from the outer corona to the edge of the solar plasma at the heliopause separating primarily solar plasma from interstellar plasma.	
Allowed Values:	
Inner	
Near Earth	
Outer	
Remote 1AU	
<b>High</b>	<b>Numeric</b>
The largest value within a range of possible values.	
<b>Hydrodynamic</b>	<b>Item</b>
Periodic or quasi-periodic oscillations of fluid quantities.	
<b>I</b>	<b>Item</b>
Projection of a vector along the first named axis of a coordinate system. Typically the X axis, but could be the R axis for an RTN coordinate system.	
<b>IDFS</b>	<b>Item</b>
Instrument Data File Set (IDFS) is a set of files written in a prescribed format which contain data, timing data, and meta-data. IDFS was developed at Southwest Research Institute (SwRI).	
<b>IDL</b>	<b>Item</b>
Interactive Data Language (IDL) save set. IDL is a proprietary format.	
<b>IJ</b>	<b>Item</b>
A measure of the length of a position or measured vector projected into the i-j (typically X-Y) plane of the coordinate system.	
<b>IK</b>	<b>Item</b>
A measure of the length of a position or measured vector projected into the i-k (typically X-Z)	

plane of the coordinate system.

<b>Image</b>	<b>Item</b>
A two-dimensional representation of data with values at each element of the array related to an intensity or a color.	
<b>Image Intensity</b>	<b>Item</b>
Measurements of the two-dimensional distribution of the intensity of photons from some region or object such as the Sun or the polar auroral regions; can be in any wavelength band, and polarized, etc.	
<b>Image URL</b>	<b>URL</b>
A URL to graphic, image or movie.	
<b>Imager</b>	<b>Item</b>
An instrument which samples the radiation from an area at one or more spectral ranges emitted or reflected by an object.	
<b>Imaging Spectrometer</b>	<b>Item</b>
An instrument which is a multispectral scanner with a very large number of channels (64-256 channels) with very narrow band widths.	
<b>Index</b>	<b>Sequence</b>
The location of an item in an array or vector. An index can be multivalued to represent the location in a multidimensional object.	
<b>Information URL</b>	<b>Container</b>
Attributes of the method of acquiring additional information.	
Sub-elements:	
Description	
Language	
Name	
URL	
<b>Infrared</b>	<b>Item</b>
Photons with a wavelength range: 760 to 1.00x10 <sup>6</sup> nm	
<b>Inner</b>	<b>Item</b>
The region of the heliosphere extending radially out from the "surface" of the Sun to 1 AU.	
<b>Input Resource ID</b>	<b>Text</b>
The resource identifier for a resource which was used to generate this resource.	
<b>Instrument</b>	<b>Container</b>
A device which is used to sense and parametrize a physical phenomenon.	
Sub-elements:	
Caveats	
Extension	
Instrument Type	
Investigation Name	
Observatory ID	
Resource Header	
Resource ID	
<b>Instrument ID</b>	<b>Text</b>
The identifier of an Instrument resource.	
<b>Instrument Status</b>	<b>Item</b>
A quantity directly related to the operation or function of an instrument.	

Instrument Type	Enumeration
A characterization of an integrated collection of software and hardware containing one or more sensors and associated controls used to produce data on an environment.	
Allowed Values:	
Antenna	
Channeltron	
Coronagraph	
Double Sphere	
Dust Detector	
Electron Drift Instrument	
Electrostatic Analyser	
Energetic Particle Instrument	
Faraday Cup	
Flux Feedback	
Fourier Transform Spectrograph	
Geiger-Mueller Tube	
Imager	
Imaging Spectrometer	
Interferometer	
Ion Chamber	
Ion Drift	
Langmuir Probe	
Long Wire	
Magnetometer	
Mass Spectrometer	
Microchannel Plate	
Multispectral Imager	
Neutral Atom Imager	
Neutral Particle Detector	
Particle Correlator	
Particle Detector	
Photometer	
Photopolarimeter	
Platform	
Proportional Counter	
Quadrispherical Analyser	
Radar	
Radiometer	
Resonance Sounder	
Retarding Potential Analyser	
Riometer	
Scintillation Detector	
Search Coil	
Sounder	
Spacecraft Potential Control	
Spectral Power Receiver	
Spectrometer	
Time Of Flight	
Unspecified	
Waveform Receiver	
Integral	Item
The summation of values above a given threshold and over area or solid-angle range.	
Intensity	Item
The measurement of radiant or wave energy per unit detector area per unit bandwidth per unit solid angle per unit time.	
Interferometer	Item
An instrument to study the properties of two or more waves from the pattern of interference created by their superposition.	
Interior	Item

The region inside the body which is not visible from outside the body.

<b>Interplanetary Shock</b>	<b>Item</b>
-----------------------------	-------------

A shock propagating generally antisunward through the slower solar wind, often seen in front of CME-associated plasma clouds.

<b>Interstellar</b>	<b>Item</b>
---------------------	-------------

The region between stars outside of the star's heliopause.

<b>Investigation Name</b>	<b>Text</b>
---------------------------	-------------

The name given to the contract or engagement which enabled the data to be produced. Each investigation is associated with a Principal Investigator or Guest Investigator who was responsible for the original proposal. For single PI missions each major subsystem having its own identified Team Leader may also be classed as an "Investigation" for the purposes of data archiving.

<b>Ion</b>	<b>Item</b>
------------	-------------

An atom that has acquired a net electric charge by gaining or losing one or more electrons.(Note:  $Z > 2$ )

<b>Ion Chamber</b>	<b>Item</b>
--------------------	-------------

A device in which the collected electrical charge from ionization in a gas-filled cavity is taken to be the proportion to some parameter (e.g. dose or exposure) of radiation field

<b>Ion Composition</b>	<b>Item</b>
------------------------	-------------

In situ measurements of the relative flux or density of electrically charged particles in the space environment. May give simple fluxes, but full distribution functions are sometimes measured.

<b>Ion Drift</b>	<b>Item</b>
------------------	-------------

A device which measures the current produced by the displacement of ambient ions on a grid, thereby allowing the determination of the ion trajectory and velocity.

<b>Ionosphere</b>	<b>Enumeration</b>
-------------------	--------------------

The charged or ionized gases surrounding a body that are nominally bound to the body by virtue of the gravitational attraction.

Allowed Values:

D-Region  
E-Region  
F-Region  
Topside

<b>Irradiance</b>	<b>Item</b>
-------------------	-------------

A radiometric term for the power of electromagnetic radiation at a surface, per unit area. "Irradiance" is used when the electromagnetic radiation is incident on the surface. The SI unit of irradiance is watts per square meter ( $\text{W} \cdot \text{m}^{-2}$ ).

<b>J</b>	<b>Item</b>
----------	-------------

Projection of a vector along the second named axis of a coordinate system. Typically the Y axis, but could be the T axis for an RTN coordinate system.

<b>J2000</b>	<b>Item</b>
--------------	-------------

An astronomical coordinate system which uses the mean equator and equinox of Julian date 2451545.0 TT (Terrestrial Time), or January 1, 2000, noon TT. (aka J2000) to define a celestial reference frame.

<b>JK</b>	<b>Item</b>
-----------	-------------

A measure of the length of a position or measured vector projected into the j-k (typically Y-Z) plane of the coordinate system.

<b>JPEG</b>	<b>Item</b>
-------------	-------------

A binary format for still images defined by the Joint Photographic Experts Group

<b>Jupiter</b>	Item
The fifth planet from the sun in our solar system.	
<b>K</b>	Item
Projection of a vector along the third named axis of a coordinate system. Typically the Z axis, but could be the N axis for an RTN coordinate system.	
<b>K-7699</b>	Item
A spectrum with a wavelength range centred at 769.9 nm. VSO nickname: K-7699 dopplergram with a range of 769.8 nm to 770.0 nm.	
<b>Keyword</b>	Text
A word or phrase that is relevant to the resource but does not exist in other documentary information.	
<b>LBH Band</b>	Item
Lyman-Birge-Hopfield band in the far ultraviolet range with wavelength range of 140nm to 170 nm.	
<b>LGM</b>	Item
Local Geomagnetic - A coordinate system used mainly for Earth surface or near Earth surface magnetic field data. X axis northward from observation point in a geographic meridian. Z axis downward towards Earth's center. In this system, H (total horizontal component) = $\text{SQRT}(B_x^2 + B_y^2)$ and D (declination angle) = $\arctan(B_y/B_x)$	
<b>Langmuir Probe</b>	Item
A monopole antenna associated with an instrument. The instrument applies a potential to the antenna which is swept to determine the voltage/current characteristic. This provides information about the plasma surrounding the probe and spacecraft.	
<b>Language</b>	Text
The two character indicator of language selected from the ISO 630-1 codes for the representation of names of languages.	
<b>Latitude</b>	Numeric
The angular distance north (positive) or south (negative) from the equator, measured along the meridian passing through the point.	
<b>Layout</b>	Item
The structured arrangement of items in a collection.	
<b>Line Depth</b>	Item
The measure of the amount of absorption below the continuum (depth) in a particular wavelength or frequency in an absorption spectrum.	
<b>Line Of Sight</b>	Item
The line of sight is the line that connects the observer with the observed object. This expression is often used with measurements of Doppler velocity and magnetic field in magnetograms, where only the component of the vector field directed along the line of sight is measured.	
<b>Linear</b>	Item
Polarization where the E-field vector is confined to a given plane	
<b>Linear Scale</b>	Item
Intervals which are equally spaced.	
<b>Location</b>	Container
A position in space definable by a regional referencing system and geographic coordinates.	

## Sub-elements:

Coordinate System Name  
 Elevation  
 Latitude  
 Longitude  
 Observatory Region

<b>Log Scale</b>	<b>Item</b>
Intervals which are spaced proportionally to the logarithms of the values being represented.	
<b>Long Wire</b>	<b>Item</b>
A dipole antenna whose active (sensor) elements are two wires deployed in the equatorial plane on opposite sides of a spinning spacecraft, and whose length is several times greater than the spacecraft diameter.	
<b>Longitude</b>	<b>Numeric</b>
The angular distance measured west (positive) or east (negative) from a north-south line called the Prime Meridian.	
<b>Low</b>	<b>Numeric</b>
The smallest value within a range of possible values.	
<b>MAG</b>	<b>Item</b>
Geomagnetic - geocentric. Z axis is parallel to the geomagnetic dipole axis, positive north. X is in the plane defined by the Z axis and the Earth's rotation axis. If N is a unit vector from the Earth's center to the north geographic pole, the signs of the X and Y axes are given by $Y = N \times Z$ , $X = Y \times Z$ . See Russell, 1971, and < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >	
<b>MATLAB_4</b>	<b>Item</b>
MATLAB Workspace save set, version 4. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.	
<b>MATLAB_6</b>	<b>Item</b>
MATLAB Workspace save set, version 6. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.	
<b>MATLAB_7</b>	<b>Item</b>
MATLAB Workspace save set, version 7. MAT-files are double-precision, binary, MATLAB format files. Version 7 includes data compression and Unicode encoding. MATLAB is a proprietary product of The MathWorks.	
<b>MD5</b>	<b>Item</b>
Message Digest 5 (MD5) is a 128-bit message digest algorithm created in 1991 by Professor Ronald Rivest.	
<b>MFA</b>	<b>Item</b>
Magnetic Field Aligned - A coordinate system spacecraft-centered system with Z in the direction of the ambient magnetic field vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >	
<b>MHD</b>	<b>Item</b>
Hydrodynamic waves in a magnetized plasma in which the background magnetic field plays a key role in controlling the wave propagation characteristics.	
<b>MPEG</b>	<b>Item</b>
A digital format for movies defined by the Motion Picture Experts Group	
<b>Magnetic</b>	<b>Item</b>
The physical attribute attributed to a magnet or its equivalent.	

<b>Magnetic Cloud</b>	<b>Item</b>
A transient event observed in the solar wind characterized as a region of enhanced magnetic field strength, smooth rotation of the magnetic field vector and low proton density and temperature.	
<b>Magnetic Field</b>	<b>Item</b>
A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).	
<b>Magnetogram</b>	<b>Item</b>
Measurements of the vector or line-of-sight magnetic field determined from remote sensing measurements of the detailed structure of spectral lines, including their splitting and polarization. ("Magnetogram.")	
<b>Magnetometer</b>	<b>Item</b>
An instrument which measures the ambient magnetic field.	
<b>Magnetopause Crossing</b>	<b>Item</b>
A crossing of the interface between the shocked solar wind in the magnetosheath and the magnetic field and plasma in the magnetosphere.	
<b>Magnetosheath</b>	<b>Item</b>
The region between the bow shock and the magnetopause, characterized by very turbulent plasma.	
<b>Magnetosonic Mach Number</b>	<b>Item</b>
The ratio of the velocity of fast mode waves to the Alfven velocity.	
<b>Magnetosphere</b>	<b>Enumeration</b>
The region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of the planet's magnetic field.	
Allowed Values:	
Magnetotail	
Main	
Polar	
Radiation Belt	
<b>Magnetotail</b>	<b>Item</b>
The region on the night side of the body where the magnetic field is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re ( $X > -10R_E$ ).	
<b>Magnitude</b>	<b>Item</b>
A measure of the strength of a vector quantity or length of its representational vector.	
<b>Main</b>	<b>Item</b>
The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.	
<b>Mars</b>	<b>Item</b>
The fourth planet from the sun in our solar system.	
<b>Mass</b>	<b>Item</b>
The measure of inertia (mass) of individual objects (e.g., aerosols).	
<b>Mass Density</b>	<b>Item</b>
The mass of particles per unit volume.	
<b>Mass Spectrometer</b>	<b>Item</b>
An instrument which distinguishes chemical species in terms of their different isotopic masses.	

Measurement Type	Enumeration
A characterization of the quantitative assessment of a phenomenon. Allowed Values:	
Activity Index Dopplergram Electric Field Energetic Particles Ephemeris Image Intensity Instrument Status Ion Composition Irradiance Magnetic Field Magnetogram Neutral Atom Images Neutral Gas Profile Radiance Spectrum Thermal Plasma Waves Waves.Active Waves.Passive	
Mercury	Item
The first planet from the sun in our solar system.	
Mesosphere	Item
The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.	
Metadata Contact	Item
An individual who can affect a change in the metadata describing a resource.	
Microchannel Plate	Item
An instrument used for the detection of elementary particles, ions, ultraviolet rays and soft X-rays constructed from very thin conductive glass capillaries.	
Microwave	Item
Photons with a wavelength range: $1.00 \times 10^6$ to $1.50 \times 10^7$ nm	
Mirror URL	URL
A Uniform Resource Locator (URL) to an alternate location of a resource.	
Mixed	Container
A parameter derived from more than one of the type of parameter. For example, plasma beta, the ratio of plasma particle energy density to the energy density of the magnetic field permeating the plasma, is "mixed." Sub-elements:	
Mixed Quantity Qualifier	
Mixed Quantity	Enumeration
A characterization of the combined attributes of a quantity. Allowed Values:	
Alfven Mach Number Alfven Velocity Magnetosonic Mach Number Other Plasma Beta Plasma Frequency-To-Gyrofreque	

## Thermal Pressure

<b>Mode Amplitude</b>	<b>Item</b>
In helioseismology the magnitude of oscillation of waves of a particular geometry.	
<b>Molecule</b>	<b>Item</b>
A group of atoms so united and combined by chemical affinity that they form a complete, integrated whole, being the smallest portion of any particular compound that can exist in a free state	
<b>Moment</b>	<b>Item</b>
Parameters determined by integration over a distribution function convolved with a power of velocity.	
<b>Multispectral Imager</b>	<b>Item</b>
An instrument which captures images at multiple spectral ranges.	
<b>NCAR</b>	<b>Item</b>
The National Center for Atmospheric Research (NCAR) format. A complete description of that standard is given in appendix C of the "Report on Establishment & Operation of the Incoherent-Scatter Data Base", dated August 23, 1984, obtainable from NCAR, P.O. Box 3000 Boulder, Colorado 80307-3000.	
<b>Na-D</b>	<b>Item</b>
A spectrum with a wavelength range of centered at 589.3 nm. VSO nickname: Na-D image with a range of 588.8 nm to 589.8 nm.	
<b>Name</b>	<b>Text</b>
A language unit by which a person or thing is known.	
<b>Near Earth</b>	<b>Item</b>
The heliospheric region near the Earth which extends to and includes the area near the L1 and L2 Lagrange point.	
<b>Near Surface</b>	<b>Enumeration</b>
The gaseous and possibly ionized environment of a body extending from the surface to some specified altitude. For the Earth, this altitude is 2000 km.	
Allowed Values:	
Atmosphere Auroral Region Equatorial Region Ionosphere Ionosphere.D-Region Ionosphere.E-Region Ionosphere.F-Region Ionosphere.Topside Mesosphere Plasmasphere Polar Cap South Atlantic Anomaly Region Stratosphere Thermosphere Troposphere	
<b>Neptune</b>	<b>Item</b>
The seventh planet from the sun in our solar system.	
<b>NetCDF</b>	<b>Item</b>
Unidata Program Center's Network Common Data Form (NetCDF). A self-describing portable data format for array-oriented data access. See < <a href="http://my.unidata.ucar.edu/content/software/netcdf">http://my.unidata.ucar.edu/content/software/netcdf</a> >	

Neutral	Item
Either a particle, an object, or a system that has a net electric charge of zero	
Neutral Atom Imager	Item
An instrument which measures the quantity and properties of neutral particles over a range of angles. Measured properties can include mass and energy.	
Neutral Atom Images	Item
Measurements of neutral atom fluxes as a function of look direction; often related to remote energetic charged particles that lose their charge through charge-exchange and then reach the detector on a line-of-sight trajectory.	
Neutral Gas	Item
Measurements of neutral atomic and molecular components of a gas.	
Neutral Particle Detector	Item
An instrument which measures the quantity and properties of neutral particles. Measured properties can include mass and plasma bulk densities.	
Ni-6768	Item
A spectrum with a wavelength range centered at 676.8 nm. VSO nickname: Ni-6768 dopplergram with a range of of 676.7 nm to 676.9 nm.	
None	Item
A lack or absence of anything.	
Note	Text
Information which is useful or important for the understanding of a value or parameter.	
Number Density	Item
The number of particles per unit volume.	
Number Flux	Item
The number of particles passing through a unit area in a unit time.	
Numerical Data	Container
Data product stored as numerical values in a specified format.

Observatory Group	Text
-------------------	------

A set of programmatically related observatories.

Observatory ID	Text
----------------	------

The identifier of an Observatory resource.

Observatory Region	Enumeration
--------------------	-------------

A spatial location distinguished by certain natural features or physical characteristics where an observatory is located.

Allowed Values:

- Asteroid
- Comet
- Earth
- Earth.Magnetosheath
- Earth.Magnetosphere
- Earth.Magnetosphere.Magnetotail
- Earth.Magnetosphere.Main
- Earth.Magnetosphere.Polar

- Venus

Observed Region	Enumeration
-----------------	-------------

The portion of space measured by the instrument at the time of an observation. A region is

distinguished by certain natural features or physical characteristics. It is the location of the observatory for in situ data, the location or region sensed by remote sensing observatories and the location-of-relevance for parameters that are derived from observational data.

Allowed Values:

Asteroid  
 Comet  
 Earth  
 Earth.Magnetosheath  
 Earth.Magnetosphere  
 Earth.Magnetosphere.Magnetotail  
 Earth.Magnetosphere.Main  
 Earth.Magnetosphere.Polar

 Sun.Transition Region  
 Uranus  
 Venus

Offline	Item
Not directly accessible electronically. This includes resources which may to be moved to an on-line status in response to a given request.	
Online	Item
Directly accessible electronically.	
Open	Item
Access is granted to everyone.	
Optical	Item
Photons with a wavelength range: 380 to 760 nm	

<b>Organization Name</b>	<b>Text</b>
A unit within a company or other entity (e.g., Government agency or branch of service) within which many projects are managed as a whole.	
<b>Other</b>	<b>Item</b>
Not classified with more specific terms. The context of its usage may be described in related text.	
<b>Outer</b>	<b>Item</b>
The region of the heliosphere from, but not including, 1 AU to the farthest extent of the heliosphere (heliopause).	
<b>PDF</b>	<b>Item</b>
A document expressed in the Portable Document Format (PDF) as defined by Adobe.	
<b>PNG</b>	<b>Item</b>
A digital format for still images. Portable Network Graphics (PNG)	
<b>Paper</b>	<b>Item</b>
A formal presentation of an idea or discovery typically more than a few pages in length.	
<b>Parallel</b>	<b>Item</b>
Having the same direction as a given direction	
<b>Parameter</b>	<b>Container</b>
A container of information regarding a parameter whose values are part of the product. Every product contains or can be related to one or more parameters.	
Sub-elements:

Wave	
<b>Parameter Key</b>	<b>Text</b>
The name or identifier which can be used to access the parameter in the resource. The associated value is dependent on the service used to access the resource.	
<b>Parent ID</b>	<b>Text</b>
The resource identifier for a resource that a resource is a part of. The resource inherits the attributes of the referenced resource. Attributes defined in the resource override attributes of the parent in the manner prescribed by the containing resource.	
<b>Part Of</b>	<b>Item</b>
A portion of a larger resource.	
<b>Particle</b>	<b>Container</b>

A description of the types of particles observed in the measurement. This includes both direct observations and inferred observations.

Sub-elements:

- Atomic Number
- Azimuthal Angle Range
- Energy Range
- Particle Quantity
- Particle Type
- Polar Angle Range
- Qualifier

<b>Particle Correlator</b>	<b>Item</b>
----------------------------	-------------

An instrument which correlates particle flux to help identify wave/particle interactions.

<b>Particle Detector</b>	<b>Item</b>
--------------------------	-------------

An instrument which detects particle flux!!!

<b>Particle Quantity</b>	<b>Enumeration</b>
--------------------------	--------------------

A characterization of the physical properties of the particle.

Allowed Values:

- Average Charge State
- Count Rate
- Counts
- Energy
- Energy Density
- Energy Flux
- Flow Speed
- Flow Velocity
- Gyrofrequency
- Heat Flux
- Mass
- Mass Density
- Number Density
- Number Flux
- Phase-Space Density
- Plasma Frequency
- Pressure
- Sonic Mach Number
- Temperature
- Thermal Speed
- Velocity

<b>Particle Type</b>	<b>Enumeration</b>
----------------------	--------------------

A characterization of the kind of particle observed by the measurement.

Allowed Values:

- Aerosol
- Alpha Particle
- Dust
- Electron
- Ion
- Molecule
- Neutral
- Proton

<b>Passive</b>	<b>Item</b>
----------------	-------------

Movement or effect produced by outside influence. A passive measurement is one which does not produce a transmission or excitation as a part of the measurement cycle.

<b>Peak</b>	<b>Item</b>
-------------	-------------

The maximum value for the quantity in question, over a period of time which is usually equal to the cadence.

<b>Per</b>	<b>Duration</b>
The time interval over which a characterization applies. For example, the number of bytes generated each day.	
<b>Perpendicular</b>	<b>Item</b>
At right angles to a given direction.	
<b>Person</b>	<b>Container</b>
An individual human being. Sub-elements:	
Address	
Email	
Extension	
Fax Number	
Organization Name	
Person Name	
Phone Number	
Release Date	
Resource ID	
<b>Person ID</b>	<b>Text</b>
The identifier assigned to a Person description.	
<b>Person Name</b>	<b>Text</b>
The words used to address an individual.	
<b>Phase Angle</b>	<b>Item</b>
Phase difference between two or more waves, normally expressed in degrees.	
<b>Phase-Space Density</b>	<b>Item</b>
The number of particles per unit volume in the six-dimensional space of position and velocity.	
<b>Phenomenon Type</b>	<b>Enumeration</b>
The characteristics or categorization of an event type. Allowed Values:	
Active Region	
Aurora	
Bow Shock Crossing	
Coronal Hole	
Coronal Mass Ejection	
EIT Wave	
Energetic Solar Particle Event	
Forbush Decrease	
Geomagnetic Storm	
Interplanetary Shock	
Magnetic Cloud	
Magnetopause Crossing	
Radio Burst	
Solar Flare	
Solar Wind Extreme	
Substorm	
<b>Phone Number</b>	<b>Text</b>
The symbols and numerals required to contact an individual by telephone. The string may contain punctuation marks such as dash (-) or dot (.) to separate fields within the string.	
<b>Photometer</b>	<b>Item</b>
An instrument which measures the strength of electromagnetic radiation within a spectral band which can range from ultraviolet to infrared and includes the visible spectrum.	
<b>Photon</b>	<b>Item</b>

Electromagnetic waves detected by techniques that utilize their corpuscular character (e.g., CCD, CMOS, photomultipliers).

Photopolarimeter	Item
An instrument which measures the intensity and polarization or radiant energy. A photopolarimeter is a combination of a photometer and a polarimeter.	
Photosphere	Item
The atmospheric layer of the Sun or a star from which continuum radiation, especially optical, is emitted to space. For the Sun, the photosphere is about 500 km thick.	
Plasma Beta	Item
The ratio of thermal pressure to magnetic pressure in plasma.	
Plasma Frequency	Item
A number-density-dependent characteristic frequency of a plasma.	
Plasma Frequency-To-Gyrofrequency Ratio	Item
The ratio of Plasma Frequency to Gyrofrequency.	
Plasma Waves	Item
Self-consistent collective oscillations of particles and fields (electric and magnetic) in a plasma.	
Plasmagram	Item
The characterization of signal strengths in active sounding measurements as a function of virtual range or signal delay time and sounding frequency. A Plasmagram is also referred to as an Ionogram.	
Plasmasphere	Item
A region of the magnetosphere consisting of low energy (cool) plasma. It is located above the ionosphere. The outer boundary of the plasmasphere is known as the plasmopause, which is defined by an order of magnitude drop in plasma density.	
Platform	Item
A collection of components which can be positioned and oriented as a single unit. A platform may contain other platforms. For example, a spacecraft is a platform which may have components that can be articulated and are also considered platforms.	
Pluto	Item
The ninth (sub)planet from the sun in our solar system.	
Polar Angle	Item
The angle between the position or measured vector and the k-axis of the coordinate system. Mathematically defined as $\arctan( \text{SQRT}(i^2+j^2) /k)$ .	
Polar Angle Range	Container
The range of possible polar angles for a group of energy observations. Defaults units are degrees.	
Sub-elements:	
Bin	
High	
Low	
Units	
Polar Cap	Item
The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude and the region south of 60 degrees south latitude.	
Polarization	Item
Direction of the electric vector of an electromagnetic wave. The wave can be linearly polarized	

in any direction perpendicular to the direction of travel, circularly polarized (clockwise or counterclockwise), unpolarized, or mixtures of the above.

<b>Positional</b>	<b>Item</b>
The specification of the location of an object or measurement within a reference coordinate system. The position is usually expressed as a set of values corresponding to the location along a set of orthogonal axes together with the date/time of the observation.	
<b>Postscript</b>	<b>Item</b>
A page description programming language created by Adobe Systems Inc. that is a device-independent industry standard for representing text and graphics.	
<b>Potential</b>	<b>Item</b>
A field which obeys Laplace's Equation.	
<b>Poynting Flux</b>	<b>Item</b>
Electromagnetic energy flux transported by a wave characterized as the rate of energy transport per unit area per steradian.	
<b>Pressure</b>	<b>Item</b>
The force per unit area exerted by a particle distribution or field.	
<b>Principal Investigator</b>	<b>Item</b>
An individual who is the administrative and scientific lead for an investigation.	
<b>Prior ID</b>	<b>Text</b>
The resource identifier for a resource that is superseded or replaced by a resource.	
<b>Probable</b>	<b>Item</b>
Likely given the available evidence.	
<b>Processing Level</b>	<b>Enumeration</b>
The standard classification of the processing performed on the product. Allowed Values: Calibrated Raw Uncalibrated	
<b>Profile</b>	<b>Item</b>
Measurements of a quantity as a function of height above an object such as the limb of a body.	
<b>Project Scientist</b>	<b>Item</b>
An individual who is an expert in the phenomenon and related physics explored by the project. A project scientist may also have a managerial role within the project.	
<b>Projection</b>	<b>Enumeration</b>
A measure of the length of a position or measured vector as projected into a plane of the coordinate system. Allowed Values: IJ IK JK	
<b>Propagation Time</b>	<b>Item</b>
Time difference between transmission and reception of a wave in an active wave experiment.	
<b>Proportional Counter</b>	<b>Item</b>
An instrument which measures energy of ionization radiation based on interactions with a gas.	
<b>Proton</b>	<b>Item</b>

An elementary particle that is a constituent of all atomic nuclei, that carries a positive charge numerically equal to the charge of an electron, and that has a mass of  $1.673 \times 10^{(-24)}$  gram.

<b>Provider Processing Level</b>	<b>Text</b>
The provider specific classification of the processing performed on the product.	
<b>Provider Resource Name</b>	<b>Text</b>
A short textual description of a resource used by the provider which may be used to identify a resource.	
<b>Provider Version</b>	<b>Text</b>
Describes the release or edition of the product used by the provider. The formation rule may vary between providers. It is intended to aid in queries to the provider regarding the product.	
<b>Pseudo</b>	<b>Item</b>
Similar to or having the appearance of something else. Can be used to indicate an estimation or approximation of a particular quantity.	
<b>Publisher</b>	<b>Item</b>
An individual, organization, institution or government department responsible for the production and dissemination of a document.	
<b>Quadrispherical Analyser</b>	<b>Item</b>
An instrument used for the 3-D detection of plasma, energetic electrons and ions, and for positive-ion composition measurements.	
<b>Qualifier</b>	<b>Enumeration</b>
Characterizes the refinement to apply to a type or attribute of a quantity.	
Allowed Values:	
Anisotropy	
Average	
Characteristic	
Circular	
Column	
Component	
Component.I	
Component.J	
Component.K

Uncertainty  
Variance  
Vector

Quantity	Numeric
A value that describes a characteristic of a system.	
QuickTime	Item
A format for digital movies, as defined by Apple Computer. See <a href="http://developer.apple.com/quicktime/">http://developer.apple.com/quicktime/</a>	
RTN	Item
Radial Tangential Normal. Typically centered at a spacecraft. Used for IMF and plasma V vectors. R (radial) axis is radially away from the Sun, T (tangential) axis is normal to the plane formed by R and the Sun's spin vector, positive in the direction of planetary motion. N (normal) is $R \times T$ .	
Radar	Item
An instrument that uses directional properties of returned power to infer spatial and/or other characteristics of a remote object.	
Radiance	Item
A radiometric measurement that describes the amount of electromagnetic radiation that passes through or is emitted from a particular area, and falls within a given solid angle in a specified direction. They are used to characterize both emission from diffuse sources and reflection from diffuse surfaces. The SI unit of radiance is watts per steradian per square meter ( $W \cdot sr^{-1} \cdot m^{-2}$ ).	
Radiation Belt	Item
The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.	
Radio Burst	Item
Emissions of the sun in radio wavelengths from centimeters to dekameters, under both quiet and disturbed conditions. Radio Bursts can be "Type I" consisting of many short, narrow-band bursts in the metric range (300 - 50 MHz); "Type II" consisting of narrow-band emission that begins in the meter range (300 MHz) and sweeps slowly (tens of minutes) toward dekameter wavelengths (10 MHz); "Type III" consisting of narrow-band bursts that sweep rapidly (seconds) from decimeter to dekameter wavelengths (500 - 0.5 MHz); and "Type IV" consisting of a smooth continuum of broad-band bursts primarily in the meter range (300 - 30 MHz).	
Radio Frequency	Item
Photons with a wavelength range: 100,000 to $1.00 \times 10^{11}$ nm	
Radiometer	Item
An instrument for detecting or measuring radiant energy. Radiometers are commonly limited to infrared radiation.	
Ratio	Item
The relative magnitudes of two quantities.	
Raw	Item
Data in its original state with no processing to account for calibration!!!	
Registry	Container
A location or facility where resources are cataloged.	

## Sub-elements:

Access URL  
 Extension  
 Resource Header  
 Resource ID

Relative Stop Date	Duration
--------------------	----------

An indication of the nominal end date relative to the present.

Release Date	DateTime
--------------	----------

The date and time when a resource is made available. The availability of a resource coincides with the release of a resource description. If the Release Date is specified as a future date then it indicates that resource should not be made available until that time. However, this is only advisory and in practice the Release Date should be the actual date the resource description was published.

Remote 1AU	Item
------------	------

The heliospheric region near the Earth's orbit, but exclusive of the region near the Earth.

Rendering Hints	Container
-----------------	-----------

Attributes to aid in the rendering of parameter.

## Sub-elements:

Axis Label  
 Display Type  
 Scale Max  
 Scale Min  
 Scale Type  
 Value Format

Repository	Container
------------	-----------

A location or facility where resources are stored.

## Sub-elements:

Access URL  
 Extension  
 Resource Header  
 Resource ID

Repository ID	Text
---------------	------

The identifier of an Repository resource.

Resonance Sounder	Item
-------------------	------

A combination of a radio receiver and a pulsed transmitter used to study the plasma surrounding a spacecraft by identifying resonances or cut-offs (of the wave dispersion relation), whose frequencies are related to the ambient plasma density and magnetic field. When the transmitter is off it is essentially a high frequency-resolution spectral power receiver.

Resource Header	Container
-----------------	-----------

Attributes of a resource which pertain to the provider of the resource and descriptive information about the resource.

## Sub-elements:

 Resource Name

Resource ID	Text
-------------	------

A Resource ID is a URI that has the form "scheme://authority/path" where "scheme" is "spase" for those resources administered through the SPASE framework, "authority" is the unique identifier for the resource provider registered within the SPASE framework and "path" is the unique identifier of the resource within the context of the "authority". The resource ID must be unique within the SPASE framework.

<b>Resource Name</b>	<b>Text</b>
A short textual description of a resource which may be useful when read by a person.	
<b>Restricted</b>	<b>Item</b>
Access to the product is regulated and requires some form of identification.	
<b>Retarding Potential Analyser</b>	<b>Item</b>
An instrument which measures ion temperatures and ion concentrations using a planar ion trap.	
<b>Revision Of</b>	<b>Item</b>
A modified version of a resource instance.	
<b>Riometer</b>	<b>Item</b>
An instrument which measure the signal strength in various directions of the galactic radio signals. Variations in these signals are influenced by solar flare activity and geomagnetic storm and substorm processes.	
<b>Role</b>	<b>Enumeration</b>
The assigned or assumed function or position of an individual. Allowed Values:	
<ul style="list-style-type: none"> <li>Archive Specialist</li> <li>Co-Investigator</li> <li>Contributor</li> <li>Data Producer</li> <li>Deputy-PI</li> <li>General Contact</li> <li>Metadata Contact</li> <li>Principal Investigator</li> <li>Project Scientist</li> <li>Publisher</li> <li>Scientist</li> <li>Team Leader</li> <li>Team Member</li> <li>Technical Contact</li> </ul>	
<b>SC</b>	<b>Item</b>
Spacecraft - A coordinate system defined by the spacecraft geometry and/or spin. Often has Z axis parallel to spacecraft spin vector. X and Y axes may or may not corotate with the spacecraft. See SR and SR2 below.	
<b>SE</b>	<b>Item</b>
Solar Ecliptic - A heliocentric coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as HAE above. See < <a href="http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html</a> >	
<b>SHA1</b>	<b>Item</b>
Secure Hash Algorithm (SHA), a 160-bit message digest algorithm developed by the NSA and described in Federal Information Processing Standard (FIPS) publication 180-1.	
<b>SHA256</b>	<b>Item</b>
Secure Hash Algorithm (SHA), a 256-bit message digest algorithm developed by the NSA and described in Federal Information Processing Standard (FIPS) publication 180-1.	
<b>SM</b>	<b>Item</b>

Solar Magnetic - A geocentric coordinate system where the Z axis is northward along Earth's dipole axis, X axis is in plane of z axis and Earth-Sun line, positive sunward. See Russell, 1971.

SR	Item
----	------

Spin Reference - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X and Y rotate with the spacecraft. See <<http://cdpp.cnes.fr/00428.pdf>>

SR2	Item
-----	------

Spin Reference 2 - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See <<http://cdpp.cnes.fr/00428.pdf>>

SSE	Item
-----	------

Spacecraft Solar Ecliptic - A coordinate system used for deep space spacecraft, for example Helios. - X axis from spacecraft to Sun. Z axis normal to ecliptic plane, positive northward. Note: Angle between normals to ecliptic and to Helios orbit plane ~ 0.25 deg.

Saturn	Item
--------	------

The sixth planet from the sun in our solar system.

Scalar	Item
--------	------

A quantity that is completely specified by its magnitude and has no direction.

Scale Max	Numeric
-----------	---------

The maximum value that the variable is expected to attain. Used, for example, by automated plotting software.

Scale Min	Numeric
-----------	---------

The minimum value that the variable is expected to attain. Used, for example, by automated plotting software.

Scale Type	Enumeration
------------	-------------

The scaling to apply to an axis. If this attribute is not present, linear scale should be assumed.  
Allowed Values:

Linear Scale  
Log Scale

Scientist	Item
-----------	------

An individual who is an expert in the phenomenon and related physics represented by the resource.

Scintillation Detector	Item
------------------------	------

An instrument which detects flouresences of a material which is excited by high energy (ionizing) electromagnetic or charged particle radiation.

Search Coil	Item
-------------	------

An instrument which measures the time variation of the magnetic flux threading a loop by measurement of the electric potential difference induced between the ends of the wire.

Service	Container
---------	-----------

A location or facility that can perform a well defined task.

Sub-elements:

Access URL  
Extension  
Resource Header  
Resource ID

Set	Text
-----	------

A collection of items for a particular purpose.

Size	Sequence
The number of elements in each dimension of a multi-dimensional array. A scalar has a size of 1. A multi-dimensional vector will have a size for each dimension. Note that the number of elements in the size of an N-dimensional array conveys the array's dimensionality while the product of those numbers conveys the total number of elements in the array. When size is used to describe a tensor it is the number of elements in the tensor. As such it has a limited set of values. A tensor of rank 1 has a size of 3, rank 2 a size of 9, rank 3 a size of 27 and rank n a size of $3^n$ .	
Soft X-Rays	Item
X-Rays with an energy range of 0.12 keV to 12 keV.	
Solar Flare	Item
An explosive event in the Sun's atmosphere which produces electromagnetic radiation across the electromagnetic spectrum at multiple wavelengths from long-wave radio to the shortest wavelength gamma rays.	
Solar Wind Extreme	Item
Intervals of unusually large or small values of solar wind attributes such as flow speed and ion density.	
Sounder	Item
An instrument which measures the radiances from an object. A sounder may measure radiances at multiple spectral ranges.	
Source	Container
The location and attributes of an object. Sub-elements: Checksum Data Extent Mirror URL Source Type URL	
Source Type	Enumeration
A characterization of the function or purpose of the source. Allowed Values: Ancillary Browse Data Layout Thumbnail	
South Atlantic Anomaly Region	Item
The region where the Earth's inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation intensity is higher over this region than elsewhere.	
Spacecraft Orbit Plane	Item
A coordinate system where X lies in the plane normal to and in the direction of motion of the spacecraft, Z is normal to this plane and Y completes the triad in a right-handed coordinate system.	
Spacecraft Potential Control	Item
An instrument to control the electric potential of a spacecraft with respect to the ambient plasma by emitting a variable current of positive ions.	
Spase	Container
Space Physics Archive Search and Extract (SPASE). The outermost container or envelope for SPASE metadata. This indicates the start of the SPASE metadata. Sub-elements:	

Annotation  
 Catalog  
 Display Data  
 Document

<b>Spectral Power Receiver</b>	<b>Item</b>
--------------------------------	-------------

A radio receiver which determines the power spectral density of the electric or magnetic field, or both, at one or more frequencies.

<b>Spectral Range</b>	<b>Enumeration</b>
-----------------------	--------------------

The general term used to describe wavelengths or frequencies within a given span of values for those quantities.

Allowed Values:

Ca-K  
 Extreme Ultraviolet  
 Far Ultraviolet  
 Gamma Rays  
 H-alpha  
 Hard X-rays  
 He-10830  
 He-304  
 Infrared  
 K-7699  
 LBH Band  
 Microwave  
 Na-D  
 Ni-6768  
 Optical  
 Radio Frequency  
 Soft X-Rays  
 Ultraviolet  
 White-Light  
 X-Rays

<b>Spectrogram</b>	<b>Item</b>
--------------------	-------------

The characterization of signal strengths as a function of frequency (or energy) and time.

<b>Spectrometer</b>	<b>Item</b>
---------------------	-------------

An instrument that measures the component wavelengths of light (or other electromagnetic radiation) by splitting the light up into its component wavelengths.

<b>Spectrum</b>	<b>Item</b>
-----------------	-------------

The distribution of a characteristic of a physical system or phenomenon, such as the energy emitted by a radiant source, arranged in the order of wavelengths.

<b>Spherical</b>	<b>Item</b>
------------------	-------------

A coordinate representation of a position vector or of a measured vector by its magnitude and two direction angles. The angles are relative to the base axes of the coordinate system used. Typically the angles are phi [azimuth angle, =arctan (j/i)] and theta, where theta may be a polar angle, arctan {[SQRT(i<sup>2</sup>+j<sup>2</sup>)]/k}, or an elevation angle, arctan [k/SQRT (i<sup>2</sup>+j<sup>2</sup>)].

<b>Stack Plot</b>	<b>Item</b>
-------------------	-------------

A representation of data showing multiple sets of observations on a single plot, possibly

offsetting each plot by some uniform amount.

<b>Standard Deviation</b>	<b>Item</b>
The square root of the average of the squares of deviations about the mean of a set of data. Standard deviation is a statistical measure of spread or variability.	
<b>Start Date</b>	<b>DateTime</b>
The specification of a starting point in time.	
<b>Stoke's Parameters</b>	<b>Item</b>
A set of four parameters (usually called I, Q, U and V) which describe the polarization state of an electromagnetic wave propagating through space.	
<b>Stop Date</b>	<b>DateTime</b>
The specification of a stopping point in time.	
<b>Stratosphere</b>	<b>Item</b>
The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.	
<b>Strong</b>	<b>Item</b>
Highly likely given the available evidence.	
<b>Structure</b>	<b>Container</b>
The organization and relationship of individual values within a quantity. Sub-elements:	
Description	
Element	
Size	
<b>Substorm</b>	<b>Item</b>
A process by which plasma in the magnetotail becomes energized at a fast rate.	
<b>Sun</b>	<b>Enumeration</b>
The star upon which our solar system is centered. Allowed Values:	
Chromosphere	
Corona	
Interior	
Photosphere	
Transition Region	
<b>Support</b>	<b>Container</b>
Information useful in understanding the context of an observation, typically observed or measured coincidentally with a physical observation. Sub-elements:	
Qualifier	
Support Quantity	
<b>Support Quantity</b>	<b>Enumeration</b>
A characterization of the support information. Allowed Values:	
Other	
Positional	
Temporal	
Velocity	
<b>Surface</b>	<b>Item</b>
The outermost area of a solid object.	
<b>Symmetric</b>	<b>Item</b>

Equal distribution about one or more axes.

<b>TAR</b>	<b>Item</b>
A file format used to collate collections of files into one larger file, for distribution or archiving, while preserving file system information such as user and group permissions, dates, and directory structures. The format was standardized by POSIX.1-1988 and later POSIX.1-2001.	
<b>TIFF</b>	<b>Item</b>
A binary format for still pictures. Tagged Image Format File (TIFF). Originally developed by Aldus and now controlled by Adobe.	
<b>Team Leader</b>	<b>Item</b>
An individual who is the designated leader of an investigation!!!	
<b>Team Member</b>	<b>Item</b>
An individual who is a major participant in an investigation.	
<b>Technical Contact</b>	<b>Item</b>
An individual who can provide specific information with regard to the resource or supporting software	
<b>Temperature</b>	<b>Item</b>
A measure of the kinetic energy of random motion with respect to the average. Temperature is properly defined only for an equilibrium particle distribution (Maxwellian distribution).	
<b>Temporal</b>	<b>Item</b>
Pertaining to time.	
<b>Temporal Description</b>	<b>Container</b>
A characterization of the time over which the measurement was taken.	
Sub-elements:	
Cadence	
Exposure	
Time Span	
<b>Tensor</b>	<b>Item</b>
A generalized linear "quantity" or "geometrical entity" that can be expressed as a multi-dimensional array relative to a choice of basis of the particular space on which it is defined.	
<b>Text</b>	<b>Enumeration</b>
A sequence of characters which may have an imposed structure or organization.	
Allowed Values:	
ASCII	
Unicode	
<b>Thermal Plasma</b>	<b>Item</b>
Measurements of the plasma in the energy regime where the most of the plasma occurs. May be the basic fluxes in the form of distribution functions or the derived bulk parameters (density, flow velocity, etc.).	
<b>Thermal Pressure</b>	<b>Item</b>
In an MHD fluid it is the number density (N) times Boltzmann constant times the temprature in Kelvin.	
<b>Thermal Speed</b>	<b>Item</b>
For a Maxwellian distribution, the difference between the mean speed and the speed within which ~69% (one sigma) of all the members of the speed distribution occur.	
<b>Thermosphere</b>	<b>Item</b>

The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.

<b>Thumbnail</b>	<b>Item</b>
A small representation of an image which is suitable to infer what the full-sized image is like.	
<b>Time Of Flight</b>	<b>Item</b>
An instrument which measures the time it takes for a particle to travel between two detectors.	
<b>Time Series</b>	<b>Item</b>
A representation of data showing a set of observations taken at different points in time and charted as a time series.	
<b>Time Span</b>	<b>Container</b>
The duration of an interval in time.	
Sub-elements:	
Note	
Relative Stop Date	
Start Date	
Stop Date	
<b>Topside</b>	<b>Item</b>
The region at the upper most areas of the ionosphere.	
<b>Trace</b>	<b>Item</b>
The sum of the elements on the main diagonal (the diagonal from the upper left to the lower right) of a square matrix.	
<b>Transition Region</b>	<b>Item</b>
A very narrow (<100 km) layer between the chromosphere and the corona where the temperature rises abruptly from about 8000 to about 500,000 K.	
<b>Troposphere</b>	<b>Item</b>
The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.	
<b>UDF</b>	<b>Item</b>
Universal Data Format (UDF). The Optical Technology Storage Association's Universal Disk Format, based on ISO 13346. See < <a href="http://www.osta.org/specs/index.htm">http://www.osta.org/specs/index.htm</a> >	
<b>URL</b>	<b>Text</b>
Uniform Resource Locator (URL) is the global address of documents and other resources on the World Wide Web. The first part of the address indicates what protocol to use, and the second part specifies the IP address or the domain name where the resource is located followed by the pathname of the resource. A URL is specified in the form protocol://server.domain.name:port/pathname. Example protocols are HTTP or FTP, server domain name is the Internet name.	
<b>Ultraviolet</b>	<b>Item</b>
Photons with a wavelength range: 10 to 400 nm.	
<b>Uncalibrated</b>	<b>Item</b>
Duplicate data are removed from the data stream and data are time ordered. Values are not adjusted for any potential biases or external factors.	
<b>Uncertainty</b>	<b>Item</b>
A statistically defined discrepancy between a measured quantity and the true value of that quantity that cannot be corrected by calculation or calibration.	

Unicode	Item
Text in multi-byte Unicode format.	
Units	Text
A description of the standardized measurement increments in which a value is specified. The description is represented as a mathematical phrase. Units should be represented by widely accepted representation. For example, units should conform to the International System of Units (SI) which is maintained by BIPM (Bureau International des Poids et Mesures (see <a href="http://www.bipm.fr/">http://www.bipm.fr/</a> ) ) when appropriate or use tokens like "Re" to represent units of the Radius of the Earth. Within a phrase the circumflex (^) is used to indicate a power, a star (*) is used to indicate multiplication and a slash (/) division. When symbols are not separated by a mathematical operator, multiplication is assumed. Symbols for base units can be found at: <a href="http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols">http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols</a> and those for common derived units can be found at: <a href="http://www.bipm.fr/en/si/derived_units/2-2-2.html">http://www.bipm.fr/en/si/derived_units/2-2-2.html</a>	
Units Conversion	Text
The multiplicative factor for converting a unit into International System of Units (SI) units. The factor is expressed in the form "number > x", where "number" is a numerical value and "x" is the appropriate SI units. The basic SI units are Enumerated: m (meter), N (newton), kg (kilogram), Pa (pascal), s (second), Hz (hertz), A (ampere), V (volt), K (kelvin), W (watt), rad (radian), J (joule), sr (steradian), C (coulomb), T (tesla), ohm (ohm), mho (mho or seimens), H (henry), and F (farad). Two useful units which are not SI units are: degree (angle), and unitless (no units). An example is: "1.0E-5>T" which converts the units, presumable nT, to tesla. Another example is: "1.0e+3>m/s" which converts a velocity expressed in kilometers per second to meters per second.	
Unspecified	Item
A value which is not provided.	
Uranus	Item
The eighth planet from the sun in our solar system.	
VOTable	Item
A proposed IVOA standard designed as a flexible storage and exchange format for tabular data.	
Valid Max	Text
The largest legitimate value.	
Valid Min	Text
The smallest legitimate value.	
Value Format	Text
A string defining the output format used when extracting data values out to a file or screen. The magnitude and the number of significant figures needed should be carefully considered. The output format string can be in either Fortran or C syntax.	
Variance	Item
A measure of dispersion of a set of data points around their mean value. The expectation value of the squared deviations from the mean.	
Vector	Item
A set of parameter values each along some independent variable (e.g., components of a field in three orthogonal spatial directions; atmospheric temperature values at several altitudes, or at a given latitude and longitude;).	
Velocity	Item
Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".	
Venus	Item

The second planet from the sun in our solar system.

Version	Text
Indicates the release identifier. When used to indicate the release of the SPASE data model, it is a in the form Major.Minor.Fix where Major: A significant change in the architecture of the model or rewrite of the implementation. This includes major changes in design or implementation language. This number starts at 0 (zero). Minor: An addition of terms or features that require changes in documentation/external API. This number starts at 0 (zero). Fix: Any change that doesn't require documentation/external API changes. This number starts at 0 (zero).	

WGS84	Item
The World Geodetic System (WGS) defines a reference frame for the earth, for use in geodesy and navigation. The WGS84 uses the zero meridian as defined by the Bureau International de l'Heure.	

Wave	Container
Periodic or quasi-periodic (AC) variations of physical quantities in time and space, capable of propagating or being trapped within particular regimes. Sub-elements:	
Energy Range	
Frequency Range	
Qualifier	
Wave Quantity	
Wave Type	
Wavelength Range	

Wave Form	Item
Spatial or temporal variations of wave amplitude over wave-period timescales.	

Wave Quantity	Enumeration
A characterization of the physical properties of a wave. Allowed Values:	
AC-Electric Field	
AC-Magnetic Field	
Absorption	
Doppler Frequency	
Emissivity	
Energy Flux	
Equivalent Width	
Frequency	
Gyrofrequency	
Intensity	
Line Depth	
Magnetic Field	
Mode Amplitude	
Plasma Frequency	
Polarization	
Poynting Flux	
Propagation Time	
Stoke's Parameters	
Velocity	
Wavelength	

Wave Type	Enumeration
A characterization of the carrier or phenomenon of wave information observed by the measurement. Allowed Values:	
Electromagnetic	
Electrostatic	
Hydrodynamic	
MHD	

Photon  
Plasma Waves

<b>Waveform Receiver</b>	<b>Item</b>
A radio receiver which outputs the value of one or more components of the electric and/or magnetic field as a function of time.	
<b>Wavelength</b>	<b>Item</b>
The peak-to-peak distance over one wave period.	
<b>Wavelength Range</b>	<b>Container</b>
The range of possible values for the observed wavelength.	
Sub-elements:	
Bin	
High	
Low	
Spectral Range	
Units	
<b>Waves</b>	<b>Enumeration</b>
Data resulting from observations of wave experiments and natural wave phenomena. Wave experiments are typically active and natural wave phenomena are passive. Examples of wave experiments include coherent/incoherent scatter radars, radio soundings, VLF propagation studies, ionospheric scintillation of beacon satellite signals, etc. Examples of natural wave phenomena include micropulsations, mesospheric gravity waves, auroral/plasmaspheric hiss, Langmuir waves, AKR, Jovian decametric radiation, solar radio bursts, etc.	
Allowed Values:	
Active	
Passive	
<b>White-Light</b>	<b>Item</b>
Photons with a wavelength in the visible range for humans!!!	
<b>X-Rays</b>	<b>Item</b>
Photons with a wavelength range: $0.001 \leq x < 10$ nm	
<b>XML</b>	<b>Item</b>
eXtensible Mark-up Language (XML). A structured format for representing information. See <a href="http://www.w3.org/XML/">http://www.w3.org/XML/</a>	
<b>ZIP</b>	<b>Item</b>
An open standard for compression which is a variation of the LZW method and was originally	

## 8. Enumeration of Selected Quantities

Lists are either "open" or "closed". The items in a "closed" list are determined by the SPASE model and definitions of each item is in the SPASE data dictionary. The items in an "open" list are determined by an external control authority. The URL for the control authority is indicated in the definition of each "open" list.

### Access Rights List Closed

Identifiers for permissions granted or denied by the host of a product to allow other users to access and use the resource.

Term	Definition
Open	Access is granted to everyone.
Restricted	Access to the product is regulated and requires some form of identification.

### Annotation Type List Closed

Identifiers for an classification of an annotation.

Term	Definition
Anomaly	An interval where measurements or observations may be adversely affected.
Event	An action or observation which occurs at a point in time.
Feature	A prominent or distinctive characteristic that occurs at a location or persists over a period of time.

### Association Type List Closed

Identifiers for resource associations.

Term	Definition
Derived From	A transformed or altered version of a resource instance.
Other	Not classified with more specific terms. The context of its usage may be described in related text.
Part Of	A portion of a larger resource.
Revision Of	A modified version of a resource instance.

### Availability List Closed

Identifiers for indicating the method or service which may be used to access the resource.

Term	Definition
Offline	Not directly accessible electronically. This includes resources which may to be moved to an on-line status in response to a given request.
Online	Directly accessible electronically.

### Component List Closed

Identifiers for the axis of coordinate systems.

Term	Definition
I	Projection of a vector along the first named axis of a coordinate system. Typically the X axis, but could be the R axis for an RTN coordinate system.

J	Projection of a vector along the second named axis of a coordinate system. Typically the Y axis, but could be the T axis for an RTN coordinate system.
K	Projection of a vector along the third named axis of a coordinate system. Typically the Z axis, but could be the N axis for an RTN coordinate system.

Confidence Rating List	Closed
Identifiers for the classification of the certainty of an assertion.	

Term	Definition
Good	Very likely given the available evidence.
Probable	Likely given the available evidence.
Strong	Highly likely given the available evidence.

Coordinate Representation List	Closed
Identifiers of the method or form for specifying a given point or vector in a given coordinate system.	

Term	Definition
Cartesian	A representation in which a position vector or a measured vector (e.g., field or flow) is specified by its components along the base axes of the coordinate system.
Cylindrical	A coordinate representation of a position vector or measured vector (field or flow) by its k-component, the magnitude of its projection into the i-j plane, and the azimuthal angle of the i-j plane projection.
Spherical	A coordinate representation of a position vector or of a measured vector by its magnitude and two direction angles. The angles are relative to the base axes of the coordinate system used. Typically the angles are phi [azimuth angle, =arctan (j/i)] and theta, where theta may be a polar angle, arctan {[SQRT(i^2+j^2)]/k}, or an elevation angle, arctan [k/SQRT (i^2+j^2)].

Coordinate System Name List	Closed
Identifiers of the origin and orientation of a set of typically orthogonal axes.	

Term	Definition
CGM	Corrected Geomagnetic - A coordinate system from a spatial point with GEO radial distance and geomagnetic latitude and longitude, follow the epoch-appropriate IGRF/DGRF model field vector through to the point where the field line crosses the geomagnetic dipole equatorial plane. Then trace the dipole magnetic field vector Earthward from that point on the equatorial plane, in the same hemisphere as the original point, until the initial radial distance is reached. Designate the dipole latitude and longitude at that point as the CGM latitude and longitude of the original point. See <a href="http://nssdc.gsfc.nasa.gov/space/cgm/cgmm_des.html">http://nssdc.gsfc.nasa.gov/space/cgm/cgmm_des.html</a>
Carrington	A coordinate system which is centered at the Sun and is

	"fixed" with respect to the synodic rotation rate; the mean synodic value is about 27.2753 days. The Astronomical Almanac gives a value for Carrington longitude of 349.03 degrees at 0000 UT on 1 January 1995.
DM	Dipole Meridian - A coordinate system centered at the observation point. Z axis is parallel to the Earth's dipole axis, positive northward. X is in the plane defined by Z and the line linking the observation point with the Earth's center. Y is positive eastward. See <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a>
GEI	Geocentric Equatorial Inertial - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis points towards the first point of Aries (from the Earth towards the Sun at the vernal equinox). See Russell, 1971
GEO	Geographic - geocentric corotating - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis lies in Greenwich meridian, positive towards Greenwich. See Russell, 1971.
GSE	Geocentric Solar Ecliptic - A coordinate system where the X axis is from Earth to Sun. Z axis is normal to the ecliptic, positive northward. See Russell, 1971.
GSEQ	Geocentric Solar Equatorial - A coordinate system where the X axis is from Earth to Sun. Y axis is parallel to solar equatorial plane. Z axis is positive northward. See Russell, 1971
GSM	Geocentric Solar Magnetospheric - A coordinate system where the X axis is from Earth to Sun, Z axis is northward in a plane containing the X axis and the geomagnetic dipole axis. See Russell, 1971
HAE	Heliocentric Aries Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as SE below. See Hapgood, 1992.
HCI	Heliographic Carrington Inertial.
HEE	Heliocentric Earth Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis points from Sun to Earth. See Hapgood, 1992
HEEQ	Heliocentric Earth Equatorial - A coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is generally Earthward in the plane defined by the Z axis and the Sun-Earth direction. See Hapgood, 1992.
HG	Heliographic - A heliocentric rotating coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X, Y axes rotate with a 25.38 day period. The zero longitude (X axis) is defined as the longitude that passed through the ascending node of the solar equator on the ecliptic plane on 1 January, 1854 at

	12 UT. See < <a href="http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html</a> >
HGI	Heliographic Inertial - A heliocentric coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is along the intersection line between solar equatorial and ecliptic planes. The X axis was positive at SE longitude of 74.367 deg on Jan 1, 1900. (See SE below.) See < <a href="http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html</a> >
J2000	An astronomical coordinate system which uses the mean equator and equinox of Julian date 2451545.0 TT (Terrestrial Time), or January 1, 2000, noon TT. (aka J2000) to define a celestial reference frame.
LGM	Local Geomagnetic - A coordinate system used mainly for Earth surface or near Earth surface magnetic field data. X axis northward from observation point in a geographic meridian. Z axis downward towards Earth's center. In this system, H (total horizontal component) = $\text{SQRT}(B_x^2 + B_y^2)$ and D (declination angle) = $\arctan(B_y/B_x)$
MAG	Geomagnetic - geocentric. Z axis is parallel to the geomagnetic dipole axis, positive north. X is in the plane defined by the Z axis and the Earth's rotation axis. If N is a unit vector from the Earth's center to the north geographic pole, the signs of the X and Y axes are given by $Y = N \times Z$ , $X = Y \times Z$ . See Russell, 1971, and < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >
MFA	Magnetic Field Aligned - A coordinate system spacecraft-centered system with Z in the direction of the ambient magnetic field vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >
RTN	Radial Tangential Normal. Typically centered at a spacecraft. Used for IMF and plasma V vectors. R (radial) axis is radially away from the Sun, T (tangential) axis is normal to the plane formed by R and the Sun's spin vector, positive in the direction of planetary motion. N (normal) is $R \times T$ .
SC	Spacecraft - A coordinate system defined by the spacecraft geometry and/or spin. Often has Z axis parallel to spacecraft spin vector. X and Y axes may or may not corotate with the spacecraft. See SR and SR2 below.
SE	Solar Ecliptic - A heliocentric coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as HAE above. See < <a href="http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coord_des.html</a> >
SM	Solar Magnetic - A geocentric coordinate system where the Z axis is northward along Earth's dipole axis, X axis is in plane of z axis and Earth-Sun line, positive sunward.

	See Russell, 1971.
SR	Spin Reference - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X and Y rotate with the spacecraft. See < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >
SR2	Spin Reference 2 - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >
SSE	Spacecraft Solar Ecliptic - A coordinate system used for deep space spacecraft, for example Helios. - X axis from spacecraft to Sun. Z axis normal to ecliptic plane, positive northward. Note: Angle between normals to ecliptic and to Helios orbit plane ~ 0.25 deg.
Spacecraft Orbit Plane	A coordinate system where X lies in the plane normal to and in the direction of motion of the spacecraft, Z is normal to this plane and Y completes the triad in a right-handed coordinate system.
WGS84	The World Geodetic System (WGS) defines a reference frame for the earth, for use in geodesy and navigation. The WGS84 uses the zero meridian as defined by the Bureau International de l'Heure.

**Direction Angle List****Closed**

Identifiers for the angle between a vector and a base axis.

Term	Definition
Azimuth Angle	The angle between the projection into the i-j plane of a position or measured vector and the i-axis of the coordinate system. Mathematically defined as $\arctan(j/i)$ .
Elevation Angle	The angle between the position or measured vector and the i-j plane of the coordinate system. Mathematically defined as $\arctan(k/\sqrt{i^2+j^2})$ .
Polar Angle	The angle between the position or measured vector and the k-axis of the coordinate system. Mathematically defined as $\arctan([\sqrt{i^2+j^2}]/k)$ .

**Display Type List****Closed**

Identifiers for types or classes of rendered data.

Term	Definition
Image	A two-dimensional representation of data with values at each element of the array related to an intensity or a color.
Plasmagram	The characterization of signal strengths in active sounding measurements as a function of virtual range or signal delay time and sounding frequency. A Plasmagram is also referred to as an Ionogram.
Spectrogram	The characterization of signal strengths as a function of frequency (or energy) and time.
Stack Plot	A representation of data showing multiple sets of

Time Series	observations on a single plot, possibly offsetting each plot by some uniform amount. A representation of data showing a set of observations taken at different points in time and charted as a time series.
Wave Form	Spatial or temporal variations of wave amplitude over wave-period timescales.

Document Type List	Closed
--------------------	--------

Identifiers for the characterization of the content or purpose of a document.

Term	Definition
Paper	A formal presentation of an idea or discovery typically more than a few pages in length.

Earth List	Closed
------------	--------

Identifiers for the regions surrounding the Earth.

Term	Definition
Magnetosheath	The region between the bow shock and the magnetopause, characterized by very turbulent plasma.
Magnetosphere	The region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of the planet's magnetic field.
Near Surface	The gaseous and possibly ionized environment of a body extending from the surface to some specified altitude. For the Earth, this altitude is 2000 km.
Surface	The outermost area of a solid object.

Encoding List	Closed
---------------	--------

Identifiers for unambiguous rules that establishes the representation of information within a file.

Term	Definition
ASCII	A sequence of characters that adheres to American Standard Code for Information Interchange (ASCII) which is an 7-bit character-coding scheme.
BZIP2	An open standard algorithm by Julian Seward using Burrows-Wheeler block sorting and Huffman coding. See < <a href="http://www.bzip.org/">http://www.bzip.org/</a> >
Base64	A data encoding scheme whereby binary-encoded data is converted to printable ASCII characters. It is defined as a MIME content transfer encoding for use in Internet e-mail. The only characters used are the upper- and lower-case Roman alphabet characters (A–Z, a–z), the numerals (0–9), and the "+" and "/" symbols, with the "=" symbol as a special suffix (padding) code.
GZIP	An open standard algorithm distributed by GHU based on LZ77 and Huffman coding. See < <a href="http://www.gnu.org/software/gzip/gzip.html">http://www.gnu.org/software/gzip/gzip.html</a> > or < <a href="http://www.gzip.org/">http://www.gzip.org/</a> >
None	A lack or absence of anything.
TAR	A file format used to collate collections of files into one

	larger file, for distribution or archiving, while preserving file system information such as user and group permissions, dates, and directory structures. The format was standardized by POSIX.1-1988 and later POSIX.1-2001.
Unicode	Text in multi-byte Unicode format.
ZIP	An open standard for compression which is a variation of the LZW method and was originally used in the PKZIP utility.

Field Quantity List	Closed
---------------------	--------

Identifiers for the physical attribute of the field.

Term	Definition
Current	The flow of electrons through a conductor caused by a potential difference.
Electric	The physical attribute that exerts an electrical force.
Electromagnetic	Electric and magnetic field variations in time and space that propagate through a medium or a vacuum with the wave's propagation, electric field, and magnetic field vectors forming an orthogonal triad. Waves in this category are detected by having their field quantities measured.
Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.
Magnetic	The physical attribute attributed to a magnet or its equivalent.
Plasma Frequency	A number-density-dependent characteristic frequency of a plasma.
Potential	A field which obeys Laplace's Equation.
Poynting Flux	Electromagnetic energy flux transported by a wave characterized as the rate of energy transport per unit area per steradian.

Format List	Closed
-------------	--------

Identifiers for data organized according to preset specifications.

Term	Definition
AVI	Audio Video Interleave (AVI) a digital format for movies that conforms to the Microsoft Windows Resource Interchange File Format (RIFF).
Binary	A direct representation of the bits which may be stored in memory on a computer.
CDF	Common Data Format (CDF). A binary storage format developed at Goddard Space Flight Center (GSFC).
CEF	Cluster Exchange Format (CEF) is a self-documenting ASCII format designed for the exchange of data. There are two versions of CEF which are not totally compatible.
CEF 1	Cluster Exchange Format (CEF), version 1, is a self-documenting ASCII format designed for the

CEF 2	exchange of data. The metadata contains information compatible with the ISTP recommendations for CDF. Cluster Exchange Format (CEF), version 2, is a self-documenting ASCII format designed for the exchange of data and introduced for Cluster Active Archive. Compared to version 1, the metadata description of vectors and tensors is different.
FITS	Flexible Image Transport System (FITS) is a digital format primarily designed to store scientific data sets consisting of multi-dimensional arrays (1-D spectra, 2-D images or 3-D data cubes) and 2-dimensional tables containing rows and columns of data.
GIF	Graphic Interchange Format (GIF) first introduced in 1987 by CompuServe. GIF uses LZW compression and images are limited to 256 colours.
HDF	Hierarchical Data Format
HDF 4	Hierarchical Data Format, Version 4
HDF 5	Hierarchical Data Format, Version 5
HTML	A text file containing structured information represented in the HyperText Mark-up Language (HTML). See <a href="http://www.w3.org/MarkUp/">http://www.w3.org/MarkUp/</a>
IDFS	Instrument Data File Set (IDFS) is a set of files written in a prescribed format which contain data, timing data, and meta-data. IDFS was developed at Southwest Research Institute (SwRI).
IDL	Interactive Data Language (IDL) save set. IDL is a proprietary format.
JPEG	A binary format for still images defined by the Joint Photographic Experts Group
MATLAB_4	MATLAB Workspace save set, version 4. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.
MATLAB_6	MATLAB Workspace save set, version 6. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.
MATLAB_7	MATLAB Workspace save set, version 7. MAT-files are double-precision, binary, MATLAB format files. Version 7 includes data compression and Unicode encoding. MATLAB is a proprietary product of The MathWorks.
MPEG	A digital format for movies defined by the Motion Picture Experts Group
NCAR	The National Center for Atmospheric Research (NCAR) format. A complete description of that standard is given in appendix C of the "Report on Establishment & Operation of the Incoherent- Scatter Data Base", dated August 23, 1984, obtainable from NCAR, P.O. Box 3000 Boulder, Colorado 80307-3000.
NetCDF	Unidata Program Center's Network Common Data Form (NetCDF). A self-describing portable data format for array-oriented data access. See <a href="http://my.unidata.ucar.edu/content/software/netcdf">http://my.unidata.ucar.edu/content/software/netcdf</a>

PDF	A document expressed in the Portable Document Format (PDF) as defined by Adobe.
PNG	A digital format for still images. Portable Network Graphics (PNG)
Postscript	A page description programming language created by Adobe Systems Inc. that is a device-independent industry standard for representing text and graphics.
QuickTime	A format for digital movies, as defined by Apple Computer. See < <a href="http://developer.apple.com/quicktime/">http://developer.apple.com/quicktime/</a> >
TIFF	A binary format for still pictures. Tagged Image Format File (TIFF). Originally developed by Aldus and now controlled by Adobe.
Text	A sequence of characters which may have an imposed structure or organization.
UDF	Universal Data Format (UDF). The Optical Technology Storage Association's Universal Disk Format, based on ISO 13346. See < <a href="http://www.osta.org/specs/index.htm">http://www.osta.org/specs/index.htm</a> >
VOTable	A proposed IVOA standard designed as a flexible storage and exchange format for tabular data.
XML	eXtensible Mark-up Language (XML). A structured format for representing information. See < <a href="http://www.w3.org/XML/">http://www.w3.org/XML/</a> >

**Hash Function List**

Closed

Identifiers for functions or algorithms that convert a digital data object into a hash value.

Term	Definition
MD5	Message Digest 5 (MD5) is a 128-bit message digest algorithm created in 1991 by Professor Ronald Rivest.
SHA1	Secure Hash Algorithm (SHA), a 160-bit message digest algorithm developed by the NSA and described in Federal Information Processing Standard (FIPS) publication 180-1.
SHA256	Secure Hash Algorithm (SHA), a 256-bit message digest algorithm developed by the NSA and described in Federal Information Processing Standard (FIPS) publication 180-1.

**Heliosphere List**

Closed

Identifiers for regions of the solar atmosphere which extends roughly from the inner corona to the edge of the solar plasma at the heliopause separating primarily solar plasma from interstellar plasma.

Term	Definition
Inner	The region of the heliosphere extending radially out from the "surface" of the Sun to 1 AU.
Near Earth	The heliospheric region near the Earth which extends to and includes the area near the L1 and L2 Lagrange point.
Outer	The region of the heliosphere from, but not including, 1 AU to the farthest extent of the heliosphere (heliopause).
Remote 1AU	The heliospheric region near the Earth's orbit, but exclusive of the region near the Earth.

## Instrument Type List

Closed

Identifiers for the type of experiment the instrument performs. This is the technique of observation.

Term	Definition
Antenna	A sensor used to measure electric potential.
Channeltron	An instrument that detects electrons, ions, and UV-radiation, according to the principle of a secondary emission multiplier. It is typically used in electron spectroscopy and mass spectrometry.
Coronagraph	An instrument which can image things very close to the Sun by using a disk to block the Sun's bright surface which reveals the faint solar corona and other celestial objects.
Double Sphere	A dipole antenna of which the active (sensor) elements are small spheres located at the ends of two wires deployed in the equatorial plane, on opposite sides of a spinning spacecraft.
Dust Detector	An instrument which determines the mass and speed of ambient dust particles.
Electron Drift Instrument	An active experiment to measure the electron drift velocity based on sensing the displacement of a weak beam of electrons after one gyration in the ambient magnetic field.
Electrostatic Analyser	An instrument which uses charged plates to analyze the mass, charge and kinetic energies of charged particles which enter the instrument.
Energetic Particle Instrument	An instrument that measures fluxes of charged particles as a function of time, direction of motion, mass, charge and/or species.
Faraday Cup	An instrument consisting of an electrode from which electrical current is measured while a charged particle beam (electrons or ions) impinges on it. Used to determine energy spectrum and sometimes ion composition of the impinging particles.
Flux Feedback	A search coil whose bandwidth and signal/noise ratio are increased by the application of negative feedback at the sensor (flux) level by driving a collocated coil with a signal from the preamplifier.
Fourier Transform Spectrograph	An instrument that determines the spectra of a radiative source, using time-domain measurements and a Fourier transform.
Geiger-Mueller Tube	An instrument which measures density of ionizing radiation based on interactions with a gas.
Imager	An instrument which samples the radiation from an area at one or more spectral ranges emitted or reflected by an object.
Imaging Spectrometer	An instrument which is a multispectral scanner with a very large number of channels (64-256 channels) with very narrow band widths.
Interferometer	An instrument to study the properties of two or more

	waves from the pattern of interference created by their superposition.
Ion Chamber	A device in which the collected electrical charge from ionization in a gas-filled cavity is taken to be the proportion to some parameter (e.g. dose or exposure) of radiation field
Ion Drift	A device which measures the current produced by the displacement of ambient ions on a grid, thereby allowing the determination of the ion trajectory and velocity.
Langmuir Probe	A monopole antenna associated with an instrument. The instrument applies a potential to the antenna which is swept to determine the voltage/current characteristic. This provides information about the plasma surrounding the probe and spacecraft.
Long Wire	A dipole antenna whose active (sensor) elements are two wires deployed in the equatorial plane on opposite sides of a spinning spacecraft, and whose length is several times greater than the spacecraft diameter.
Magnetometer	An instrument which measures the ambient magnetic field.
Mass Spectrometer	An instrument which distinguishes chemical species in terms of their different isotopic masses.
Microchannel Plate	An instrument used for the detection of elementary particles, ions, ultraviolet rays and soft X-rays constructed from very thin conductive glass capillaries.
Multispectral Imager	An instrument which captures images at multiple spectral ranges.
Neutral Atom Imager	An instrument which measures the quantity and properties of neutral particles over a range of angles. Measured properties can include mass and energy.
Neutral Particle Detector	An instrument which measures the quantity and properties of neutral particles. Measured properties can include mass and plasma bulk densities.
Particle Correlator	An instrument which correlates particle flux to help identify wave/particle interactions.
Particle Detector	An instrument which detects particle flux!!!
Photometer	An instrument which measures the strength of electromagnetic radiation within a spectral band which can range from ultraviolet to infrared and includes the visible spectrum.
Photopolarimeter	An instrument which measures the intensity and polarization or radiant energy. A photopolarimeter is a combination of a photometer and a polarimeter.
Platform	A collection of components which can be positioned and oriented as a single unit. A platform may contain other platforms. For example, a spacecraft is a platform which may have components that can be articulated and are also considered platforms.
Proportional Counter	An instrument which measures energy of ionization radiation based on interactions with a gas.
Quadrispherical Analyser	An instrument used for the 3-D detection of plasma,

	energetic electrons and ions, and for positive-ion composition measurements.
Radar	An instrument that uses directional properties of returned power to infer spatial and/or other characteristics of a remote object.
Radiometer	An instrument for detecting or measuring radiant energy. Radiometers are commonly limited to infrared radiation.
Resonance Sounder	A combination of a radio receiver and a pulsed transmitter used to study the plasma surrounding a spacecraft by identifying resonances or cut-offs (of the wave dispersion relation), whose frequencies are related to the ambient plasma density and magnetic field. When the transmitter is off it is essentially a high frequency-resolution spectral power receiver.
Retarding Potential Analyser	An instrument which measures ion temperatures and ion concentrations using a planar ion trap.
Riometer	An instrument which measure the signal strength in various directions of the galactic radio signals. Variations in these signals are influenced by solar flare activity and geomagnetic storm and substorm processes.
Scintillation Detector	An instrument which detects flouresences of a material which is excited by high energy (ionizing) electromagnetic or charged particle radiation.
Search Coil	An instrument which measures the time variation of the magnetic flux threading a loop by measurement of the electric potential difference induced between the ends of the wire.
Sounder	An instrument which measures the radiances from an object. A sounder may measure radiances at multiple spectral ranges.
Spacecraft Potential Control	An instrument to control the electric potential of a spacecraft with respect to the ambient plasma by emitting a variable current of positive ions.
Spectral Power Receiver	A radio receiver which determines the power spectral density of the electric or magnetic field, or both, at one or more frequencies.
Spectrometer	An instrument that measures the component wavelengths of light (or other electromagnetic radiation) by splitting the light up into its component wavelengths.
Time Of Flight	An instrument which measures the time it takes for a particle to travel between two detectors.
Unspecified	A value which is not provided.
Waveform Receiver	A radio receiver which outputs the value of one or more components of the electric and/or magnetic field as a function of time.

#### Ionosphere List

Closed

Identifiers for ionospheric regions.

Term	Definition
D-Region	The layer of the ionosphere that exists approximately 50

	to 95 km above the surface of the Earth. One of several layers in the ionosphere.
E-Region	A layer of ionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the Kennelly-Heaviside layer.
F-Region	A layer that contains ionized gases at a height of around 150–800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.
Topside	The region at the upper most areas of the ionosphere.

**Magnetosphere List**

Closed

Identifiers for the region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of planet's magnetic field.

Term	Definition
Magnetotail	The region on the night side of the body where the magnetic field is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re ( $X > -10R_e$ ).
Main	The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.
Radiation Belt	The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.

**Measurement Type List**

Closed

Identifiers for the method of making an estimated value of a quantity that forms the basis of an observation.

Term	Definition
Activity Index	An indication, derived from one or more measurements, of the level of activity of an object or region, such as sunspot number, F10.7 flux, Dst, or the Polar Cap Indices.
Dopplergram	A map or image depicting the spatial distribution of line-of-sight velocities of the observed object.
Electric Field	A region of space around a charged particle, or between two voltages within which a force is exerted on charged objects in its vicinity. An electric field is the electric force per unit charge.
Energetic Particles	Pieces of matter that are moving very fast. Energetic particles include protons, electrons, neutrons, neutrinos, the nuclei of atoms, and other sub-atomic particles.
Ephemeris	The spatial coordinates of a body as a function of time. When used as an Instrument Type it represents the process or methods used to generate spatial coordinates.
Image Intensity	Measurements of the two-dimensional distribution of the intensity of photons from some region or object such as

	the Sun or the polar auroral regions; can be in any wavelength band, and polarized, etc.
Instrument Status	A quantity directly related to the operation or function of an instrument.
Ion Composition	In situ measurements of the relative flux or density of electrically charged particles in the space environment. May give simple fluxes, but full distribution functions are sometimes measured.
Irradiance	A radiometric term for the power of electromagnetic radiation at a surface, per unit area. "Irradiance" is used when the electromagnetic radiation is incident on the surface. The SI unit of irradiance is watts per square meter ( $\text{W}\cdot\text{m}^{-2}$ ).
Magnetic Field	A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).
Magnetogram	Measurements of the vector or line-of-sight magnetic field determined from remote sensing measurements of the detailed structure of spectral lines, including their splitting and polarization. ("Magnetogram.")
Neutral Atom Images	Measurements of neutral atom fluxes as a function of look direction; often related to remote energetic charged particles that lose their charge through charge-exchange and then reach the detector on a line-of-sight trajectory.
Neutral Gas	Measurements of neutral atomic and molecular components of a gas.
Profile	Measurements of a quantity as a function of height above an object such as the limb of a body.
Radiance	A radiometric measurement that describes the amount of electromagnetic radiation that passes through or is emitted from a particular area, and falls within a given solid angle in a specified direction. They are used to characterize both emission from diffuse sources and reflection from diffuse surfaces. The SI unit of radiance is watts per steradian per square meter ( $\text{W}\cdot\text{sr}^{-1}\cdot\text{m}^{-2}$ ).
Spectrum	The distribution of a characteristic of a physical system or phenomenon, such as the energy emitted by a radiant source, arranged in the order of wavelengths.
Thermal Plasma	Measurements of the plasma in the energy regime where the most of the plasma occurs. May be the basic fluxes in the form of distribution functions or the derived bulk parameters (density, flow velocity, etc.).
Waves	Data resulting from observations of wave experiments and natural wave phenomena. Wave experiments are typically active and natural wave phenomena are passive. Examples of wave experiments include coherent/incoherent scatter radars, radio soundings, VLF propagation studies, ionospheric scintillation of beacon satellite signals, etc. Examples of natural wave phenomena include micropulsations, mesospheric gravity waves, auroral/plasmaspheric hiss, Langmuir waves,

AKR, Jovian decametric radiation, solar radio bursts, etc.

#### Mixed Quantity List

Closed

Identifiers for the combined attributes of a mixed parameter quantity.

Term	Definition
Alfven Mach Number	The ratio of the bulk flow speed to the Alfven speed.
Alfven Velocity	Phase velocity of the Alfven wave; In SI units it is the velocity of the magnetic field divided by the square root of the mass density times the permeability of free space ( $\mu$ ).
Magnetosonic Mach Number	The ratio of the velocity of fast mode waves to the Alfven velocity.
Other	Not classified with more specific terms. The context of its usage may be described in related text.
Plasma Beta	The ratio of thermal pressure to magnetic pressure in plasma.
Thermal Pressure	In an MHD fluid it is the number density (N) times Boltzmann constant times the temprature in Kelvin.

#### Near Surface List

Closed

Identifiers for regions of the gaseous and possibly ionized environment of a body extending from the surface to some specified altitude.

Term	Definition
Atmosphere	The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.
Auroral Region	The region in the atmospheric where electrically-charged particles bombarding the upper atmosphere of a planet in the presence of a magnetic field produce an optical phenomenon.
Equatorial Region	A region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.
Ionosphere	The charged or ionized gases surrounding a body that are nominally bound to the body by virtue of the gravitational attraction.
Mesosphere	The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.
Plasmasphere	A region of the magnetosphere consisting of low energy (cool) plasma. It is located above the ionosphere. The outer boundary of the plasmasphere is known as the plasmopause, which is defined by an order of magnitude drop in plasma density.
Polar Cap	The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude and the region south of 60 degrees south latitude.
South Atlantic Anomaly Region	The region where the Earth's inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation

Stratosphere	intensity is higher over this region than elsewhere. The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.
Thermosphere	The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.
Troposphere	The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.

## Particle Quantity List

Closed

Identifiers for the characterization of the physical properties of the particle.

Term	Definition
Average Charge State	A measure of the composite deficit (positive) or excess (negative) of electrons with respect to protons.
Count Rate	The number of events per unit time.
Counts	An enumeration of the number of detection events occurring in a particle detector per unit time or over detector accumulation times.
Energy	The capacity for doing work as measured by the capability of doing work (potential energy) or the conversion of this capability to motion (kinetic energy)
Energy Density	The amount of energy per unit volume.
Energy Flux	The amount of energy passing through a unit area in a unit time.
Flow Speed	The rate at which particles or energy is passing through a unit area in a unit time.
Flow Velocity	The volume of matter passing through a unit area perpendicular to the direction of flow in a unit of time.
Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.
Heat Flux	Flow of thermal energy through a gas or plasma; typically computed as third moment of a distribution function.
Mass	The measure of inertia (mass) of individual objects (e.g., aerosols).
Mass Density	The mass of particles per unit volume.
Number Density	The number of particles per unit volume.
Number Flux	The number of particles passing through a unit area in a unit time.
Phase-Space Density	The number of particles per unit volume in the six-dimensional space of position and velocity.
Plasma Frequency	A number-density-dependent characteristic frequency of a plasma.
Pressure	The force per unit area exerted by a particle distribution or field.
Temperature	A measure of the kinetic energy of random motion with

Thermal Speed	respect to the average. Temperature is properly defined only for an equilibrium particle distribution (Maxwellian distribution).
Velocity	For a Maxwellian distribution, the difference between the mean speed and the speed within which ~69% (one sigma) of all the members of the speed distribution occur. Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".

**Particle Type List****Closed**

Identifiers for the characterization of the kind of particle observed by the measurement.

Term	Definition
Aerosol	A suspension of fine solid or liquid particles in a gas.
Alpha Particle	A positively charged nuclear particle that consists of two protons and two neutrons.
Dust	Free microscopic particles of solid material.
Electron	An elementary particle consisting of a charge of negative electricity equal to about $1.602 \times 10^{*-19}$ Coulomb and having a mass when at rest of about $9.109534 \times 10^{*-28}$ gram.
Ion	An atom that has acquired a net electric charge by gaining or losing one or more electrons.(Note: $Z > 2$ )
Molecule	A group of atoms so united and combined by chemical affinity that they form a complete, integrated whole, being the smallest portion of any particular compound that can exist in a free state
Neutral	Either a particle, an object, or a system that has a net electric charge of zero
Proton	An elementary particle that is a constituent of all atomic nuclei, that carries a positive charge numerically equal to the charge of an electron, and that has a mass of $1.673 \times 10^{*-24}$ gram.

**Phenomenon Type List****Closed**

Identifiers for the characteristics or categorization of an observation. Note: Joe King to provide.

Term	Definition
Active Region	A localized, transient volume of the solar atmosphere in which PLAGEs, SUNSPOTS, FACULAE, FLAREs, etc. may be observed.
Aurora	An atmospheric phenomenon consisting of bands of light caused by charged solar particles following the earth's magnetic lines of force.
Bow Shock Crossing	A crossing of the boundary between the undisturbed (except for foreshock effects) solar wind and the shocked, decelerated solar wind of the magnetosheath.
Coronal Hole	An extended region of the corona, exceptionally low in density and associated with unipolar photospheric regions. A coronal hole can be an "open" magnetic field in the corona and (perhaps) inner heliosphere which has a

	<p>faster than average outflow (wind); A region of lower than "quiet" ion and electron density in the corona; or a region of lower peak electron temperature in the corona than in the "quiet" corona.</p>
Coronal Mass Ejection	A solar event which involves a burst of plasma which is ejected from the Sun into the interplanetary medium.
EIT Wave	A wave in the corona of the Sun which produce shock waves on the Sun's chromosphere (Moreton Waves). EIT Waves are produced by large solar flare and expand outward at about 1,000 km/s. It usually appears as a slowly moving diffuse arc of brightening in H-alpha, and may travel for several hundred thousand km.
Energetic Solar Particle Event	An enhancement of interplanetary fluxes of energetic ions accelerated by interplanetary shocks and/or solar flares.
Forbush Decrease	A rapid decrease in the observed galactic cosmic ray intensity following the passage of an outwardly convecting interplanetary magnetic field disturbance, such as those associated with large CME's, that sweep some galactic cosmic rays away from Earth.
Geomagnetic Storm	A magnetospheric disturbance typically defined by variations in the horizontal component of the Earth's surface magnetic field. The variation typically starts with a field enhancement associated with a solar wind pressure pulse and continues with a field depression associated with an enhancement of the diamagnetic magnetospheric ring current.
Interplanetary Shock	A shock propagating generally antisunward through the slower solar wind, often seen in front of CME-associated plasma clouds.
Magnetic Cloud	A transient event observed in the solar wind characterized as a region of enhanced magnetic field strength, smooth rotation of the magnetic field vector and low proton density and temperature.
Magnetopause Crossing	A crossing of the interface between the shocked solar wind in the magnetosheath and the magnetic field and plasma in the magnetosphere.
Radio Burst	Emissions of the sun in radio wavelengths from centimeters to dekameters, under both quiet and disturbed conditions. Radio Bursts can be "Type I" consisting of many short, narrow-band bursts in the metric range (300 - 50 MHz).; "Type II" consisting of narrow-band emission that begins in the meter range (300 MHz) and sweeps slowly (tens of minutes) toward dekameter wavelengths (10 MHz).; "Type III" consisting of narrow-band bursts that sweep rapidly (seconds) from decimeter to dekameter wavelengths (500 - 0.5 MHz); and "Type IV" consisting of a smooth continuum of broad-band bursts primarily in the meter range (300 - 30 MHz).
Solar Flare	An explosive event in the Sun's atmosphere which

Solar Wind Extreme	produces electromagnetic radiation across the electromagnetic spectrum at multiple wavelengths from long-wave radio to the shortest wavelength gamma rays. Intervals of unusually large or small values of solar wind attributes such as flow speed and ion density.
Substorm	A process by which plasma in the magnetotail becomes energized at a fast rate.

**Processing Level List**

Closed

Identifiers to characterize the amount and type of manipulation which has been applied to the sampled data.

Term	Definition
Calibrated	Data wherein sensor outputs have been convolved with instrument response function, often irreversibly, to yield data in physical units.
Raw	Data in its original state with no processing to account for calibration!!!
Uncalibrated	Duplicate data are removed from the data stream and data are time ordered. Values are not adjusted for any potential biases or external factors.

**Projection List**

Closed

Identifiers to projections into a coordinate system.

Term	Definition
IJ	A measure of the length of a position or measured vector projected into the i-j (typically X-Y) plane of the coordinate system.
IK	A measure of the length of a position or measured vector projected into the i-k (typically X-Z) plane of the coordinate system.
JK	A measure of the length of a position or measured vector projected into the j-k (typically Y-Z) plane of the coordinate system.

**Qualifier List**

Closed

Identifiers for terms which refine the type or attribute of a quantity.

Term	Definition
Anisotropy	Direction-dependent property.
Average	The statistical mean; the sum of a set of values divided by the number of values in the set.
Characteristic	A quantity which can be easily identified and measured in a given environment.
Circular	Relative to polarization, right-hand circularly polarized light is defined such that the electric field is rotating clockwise as seen by an observer towards whom the wave is moving. Left-hand circularly polarized light is defined such that the electric field is rotating counterclockwise as seen by an observer towards whom the wave is moving. The polarization of

	magnetohydrodynamic waves is specified with respect to the ambient mean magnetic field : right-hand polarized waves have a transverse electric field component which turns in a right-handed sense (that of the gyrating electrons) around the magnetic field.
Column	A two-dimensional measure of a quantity. The column is the area over which the quantity is measured.
Component	Projection of a vector along one of the base axes of a coordinate system.
Cross Spectrum	The Fourier transform of the cross correlation of two physical or empirical observations.
Deviation	The difference between an observed value and the expected value of a quantity.
Differential	A flux measurement within a given energy and solid-angle range.
Direction	The spatial relation between an object and another object, the orientation of the object or the course along which the object points or moves.
Direction Angle	The angle between a position vector or measured vector (or one of its projections onto a plane) and one of the base axes of the coordinate system.
Fit	Values that make an model agree with the data.
Integral	The summation of values above a given threshold and over area or solid-angle range.
Line Of Sight	The line of sight is the line that connects the observer with the observed object. This expression is often used with measurements of Doppler velocity and magnetic field in magnetograms, where only the component of the vector field directed along the line of sight is measured.
Linear	Polarization where the E-field vector is confined to a given plane
Magnitude	A measure of the strength of a vector quantity or length of its representational vector.
Moment	Parameters determined by integration over a distribution function convolved with a power of velocity.
Parallel	Having the same direction as a given direction
Peak	The maximum value for the quantity in question, over a period of time which is usually equal to the cadence.
Perpendicular	At right angles to a given direction.
Phase Angle	Phase difference between two or more waves, normally expressed in degrees.
Projection	A measure of the length of a position or measured vector as projected into a plane of the coordinate system.
Pseudo	Similar to or having the appearance of something else. Can be used to indicate an estimation or approximation of a particular quantity.
Ratio	The relative magnitudes of two quantities.
Scalar	A quantity that is completely specified by its magnitude and has no direction.
Standard Deviation	The square root of the average of the squares of deviations about the mean of a set of data. Standard

Stoke's Parameters	deviation is a statistical measure of spread or variability. A set of four parameters (usually called I, Q, U and V) which describe the polarization state of an electromagnetic wave propagating through space.
Symmetric	Equal distribution about one or more axes.
Tensor	A generalized linear "quantity" or "geometrical entity" that can be expressed as a multi-dimensional array relative to a choice of basis of the particular space on which it is defined.
Trace	The sum of the elements on the main diagonal (the diagonal from the upper left to the lower right) of a square matrix.
Uncertainty	A statistically defined discrepancy between a measured quantity and the true value of that quantity that cannot be corrected by calculation or calibration.
Variance	A measure of dispersion of a set of data points around their mean value. The expectation value of the squared deviations from the mean.
Vector	A set of parameter values each along some independent variable (e.g., components of a field in three orthogonal spatial directions; atmospheric temperature values at several altitudes, or at a given latitude and longitude;).

<b>Region List</b>	<b>Closed</b>
--------------------	---------------

Identifiers for areas of the physical world which may be occupied or observed.

Term	Definition
Asteroid	A small extraterrestrial body consisting mostly of rock and metal that is in orbit around the sun.
Comet	A relatively small extraterrestrial body consisting of a frozen mass that travels around the sun in a highly elliptical orbit.
Earth	The third planet from the sun in our solar system.
Heliosphere	The solar atmosphere extending roughly from the outer corona to the edge of the solar plasma at the heliopause separating primarily solar plasma from interstellar plasma.
Interstellar	The region between stars outside of the star's heliopause.
Jupiter	The fifth planet from the sun in our solar system.
Mars	The forth planet from the sun in our solar system.
Mercury	The first planet from the sun in our solar system.
Neptune	The seventh planet from the sun in our solar system.
Pluto	The ninth (sub)planet from the sun in our solar system.
Saturn	The sixth planet from the sun in our solar system.
Sun	The star upon which our solar system is centered.
Uranus	The eighth planet from the sun in our solar system.
Venus	The second planet from the sun in our solar system.

<b>Role List</b>	<b>Closed</b>
------------------	---------------

Identifiers for the assigned or assumed function or position of an individual.

Term	Definition
------	------------

Archive Specialist	An individual who is an expert on a collection of resources and may also be knowledgeable of the phenomenon and related physics represented by the resources. This includes librarians, curators, archive scientists and other experts.
Co-Investigator	An individual who is a scientific peer and major participant in an investigation.
Contributor	An entity responsible for making contributions to the content of the resource.
Data Producer	An individual who generated the resource and is familiar with its provenance.
Deputy-PI	An individual who is an administrative or scientific leader for an investigation operating under the supervision of a Principal Investigator.
General Contact	An individual who can provide information on a range of subjects or who can direct you to a domain expert.
Metadata Contact	An individual who can affect a change in the metadata describing a resource.
Principal Investigator	An individual who is the administrative and scientific lead for an investigation.
Project Scientist	An individual who is an expert in the phenomenon and related physics explored by the project. A project scientist may also have a managerial role within the project.
Publisher	An individual, organization, institution or government department responsible for the production and dissemination of a document.
Scientist	An individual who is an expert in the phenomenon and related physics represented by the resource.
Team Leader	An individual who is the designated leader of an investigation!!!
Team Member	An individual who is a major participant in an investigation.
Technical Contact	An individual who can provide specific information with regard to the resource or supporting software

<b>Scale Type List</b>	<b>Closed</b>
------------------------	---------------

Identifiers for scaling applied to a set of numbers.

Term	Definition
Linear Scale	Intervals which are equally spaced.
Log Scale	Intervals which are spaced proportionally to the logarithms of the values being represented.

<b>Source Type List</b>	<b>Closed</b>
-------------------------	---------------

Identifiers for the characterization of the function or purpose of a source.

Term	Definition
Ancillary	A complementary item which can be subordinate, subsidiary, auxiliary, supplementary to the primary item.
Browse	A representation of an image which is suitable to reveal most or all of the details of the image.

Data	A collection of organized information, usually the results of experience, observation or experiment, or a set of premises. This may consist of numbers, words, or images, particularly as measurements or observations of a set of variables.
Layout	The structured arrangement of items in a collection.
Thumbnail	A small representation of an image which is suitable to infer what the full-sized image is like.

## Spectral Range List

Closed

Identifiers for names associated with wavelengths. Based on the ISO 21348 Solar Irradiance Standard. Additions have been made to extend the frequency ranges to include those used in space physics. Those additions are indicated in blue text. The "Total Solar Irradiance" category has not been included since it is a type of measurement and not a specific spectral range. See Appendix A - Comparison of Spectrum Domains for a comparison of the spectral ranges with other systems.

Term	Definition
Ca-K	A spectrum with a wavelength of range centered near 393.5 nm. VSO nickname: Ca-K image with range of 391.9 nm to 395.2 nm.
Extreme Ultraviolet	A spectrum with a wavelength range of 10.0 nm to 125.0nm. VSO nickname: EUV image with a range of 10.0 nm to 125.0 nm
Far Ultraviolet	A spectrum with a wavelength range of 122 nm to 200.0nm. VSO nickname: FUV image with a range of 122.0 nm to 200 nm
Gamma Rays	Photons with a wavelength range: 0.00001 to 0.001 nm
H-alpha	A spectrum with a wavelength range centered at 656.3 nm. VSO nickname: H-alpha image with a spectrum range of 655.8 nm to 656.8 nm.
Hard X-rays	Photons with a wavelength range: 0.001 to 0.1 nm and an energy range of 12 keV to 120 keV
He-10830	A spectrum with a wavelength range centered at 1082.9 nm. VSO nickname: He 10830 image with a range of 1082.5 nm to 1083.3 nm.
He-304	A spectrum centered around the resonance line of ionised helium at 304 Angstrom (30.4 nm).
Infrared	Photons with a wavelength range: 760 to 1.00x10 <sup>6</sup> nm
K-7699	A spectrum with a wavelength range centred at 769.9 nm. VSO nickname: K-7699 dopplergram with a range of 769.8 nm to 770.0 nm.
LBH Band	Lyman-Birge-Hopfield band in the far ultraviolet range with wavelength range of 140nm to 170 nm.
Microwave	Photons with a wavelength range: 1.00x10 <sup>6</sup> to 1.50x10 <sup>7</sup> nm
Na-D	A spectrum with a wavelength range of centered at 589.3 nm. VSO nickname: Na-D image with a range of 588.8 nm to 589.8 nm.
Ni-6768	A spectrum with a wavelength range centered at 676.8 nm. VSO nickname: Ni-6768 dopplergram with a range of 676.7 nm to 676.9 nm.

Optical	Photons with a wavelength range: 380 to 760 nm
Radio Frequency	Photons with a wavelength range: 100,000 to $1.00 \times 10^{11}$ nm
Soft X-Rays	X-Rays with an energy range of 0.12 keV to 12 keV.
Ultraviolet	Photons with a wavelength range: 10 to 400 nm.
White-Light	Photons with a wavelength in the visible range for humans!!!
X-Rays	Photons with a wavelength range: $0.001 \leq x < 10$ nm

<b>Sun List</b>	<b>Closed</b>
-----------------	---------------

Identifiers for regions of the star upon which our solar system is centered.

Term	Definition
Chromosphere	The region of the Sun's (or a star's) atmosphere above the temperature minimum and below the Transition Region. The solar chromosphere is approximately 400 km to 2100 km above the photosphere, and characterized by temperatures from 4500 - 28000 K.
Corona	The outermost atmospheric region of the Sun or a star, characterized by ionization temperatures above $10^5$ K. The solar corona starts at about 2100 km above the photosphere; there is no generally defined upper limit.
Interior	The region inside the body which is not visible from outside the body.
Photosphere	The atmospheric layer of the Sun or a star from which continuum radiation, especially optical, is emitted to space. For the Sun, the photosphere is about 500 km thick.
Transition Region	A very narrow (<100 km) layer between the chromosphere and the corona where the temperature rises abruptly from about 8000 to about 500,000 K.

<b>Support Quantity List</b>	<b>Closed</b>
------------------------------	---------------

Identifiers for the information useful in understanding the context of an observation, typically observed or measured coincidentally with a physical observation.

Term	Definition
Other	Not classified with more specific terms. The context of its usage may be described in related text.
Positional	The specification of the location of an object or measurement within a reference coordinate system. The position is usually expressed as a set of values corresponding to the location along a set of orthogonal axes together with the date/time of the observation.
Temporal	Pertaining to time.
Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".

<b>Text List</b>	<b>Closed</b>
------------------	---------------

Identifiers for the encoding of sequences of characters.

Term
------

	Definition
ASCII	A sequence of characters that adheres to American Standard Code for Information Interchange (ASCII) which is an 7-bit character-coding scheme.
Unicode	Text in multi-byte Unicode format.

**Wave Quantity List**

Closed

Identifiers for the characterization of the physical properties of a wave.

Term	Definition
AC-Electric Field	Alternating electric field component of a wave.
AC-Magnetic Field	Alternating magnetic field component of a wave.
Absorption	Decrease of radiant energy (relative to the background continuum spectrum).
Doppler Frequency	Change in the frequency of a propagating wave due to motion of the source, the observer, the reflector, or the propagation medium.
Emissivity	The energy emitted spontaneously per unit bandwidth (typically frequency) per unit time per unit mass of source. Emissivity is usually integrated over all directions/solid angles.
Energy Flux	The amount of energy passing through a unit area in a unit time.
Equivalent Width	The spectral width of a total absorption line having the amount of absorbed radiant energy being equivalent to that in an observed absorption line.
Frequency	The number of occurrences of a repeating event per unit time.
Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.
Intensity	The measurement of radiant or wave energy per unit detector area per unit bandwidth per unit solid angle per unit time.
Line Depth	The measure of the amount of absorption below the continuum (depth) in a particular wavelength or frequency in an absorption spectrum.
Magnetic Field	A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).
Mode Amplitude	In helioseismology the magnitude of oscillation of waves of a particular geometry.
Plasma Frequency	A number-density-dependent characteristic frequency of a plasma.
Polarization	Direction of the electric vector of an electromagnetic wave. The wave can be linearly polarized in any direction perpendicular to the direction of travel, circularly polarized (clockwise or counterclockwise), unpolarized, or mixtures of the above.
Poynting Flux	Electromagnetic energy flux transported by a wave characterized as the rate of energy transport per unit area

	per steradian.
Propagation Time	Time difference between transmission and reception of a wave in an active wave experiment.
Stoke's Parameters	A set of four parameters (usually called I, Q, U and V) which describe the polarization state of an electromagnetic wave propagating through space.
Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".
Wavelength	The peak-to-peak distance over one wave period.

**Wave Type List**

Closed

Identifiers for the carrier or phenomenon of wave information observed by the measurement.

Term	Definition
Electromagnetic	Electric and magnetic field variations in time and space that propagate through a medium or a vacuum with the wave's propagation, electric field, and magnetic field vectors forming an orthogonal triad. Waves in this category are detected by having their field quantities measured.
Electrostatic	Collective longitudinal electric-field and plasma oscillations trapped within a body of plasma.
Hydrodynamic MHD	Periodic or quasi-periodic oscillations of fluid quantities. Hydrodynamic waves in a magnetized plasma in which the background magnetic field plays a key role in controlling the wave propagation characteristics.
Photon	Electromagnetic waves detected by techniques that utilize their corpuscular character (e.g., CCD, CMOS, photomultipliers).
Plasma Waves	Self-consistent collective oscillations of particles and fields (electric and magnetic) in a plasma.

**Waves List**

Closed

Identifiers for experimental and natural wave phenomena.

Term	Definition
Active	Exerting an influence or producing a change or effect. An active measurement is one which produces a transmission or excitation as a part of the measurement cycle.
Passive	Movement or effect produced by outside influence. A passive measurement is one which does not produce a transmission or excitation as a part of the measurement cycle.

## 9. Appendix A - Comparison of Spectrum Domains

### Electromagnetic Spectrum Domains

(all wavelengths given in nanometers)

Band	Wavelength [ISO 21348]		Wavelength [EGSO]		Wavelength [VSO]	
	min	max	min	max	min	max
Gamma	0.00001	0.001	-	0.025		
X-ray	0.001	10	0.005	10	0.00	15

EXR	0.001	0.1	0.025	0.25	0.02	2
SXR	0.1	10	0.25	10	2	10
UV	10	400	10	380	10	400
VIS	400	700	380	680	380	680

## 12. Change History

<b>0.99.1</b>	
2005-06-23	Removed duplicate entries.
2005-06-23	Added Chris Harvey's definitions for Electron Drift.
2005-06-23	Particle Correlator and Spacecraft Potential Control.
2005-06-23	Released.
<b>0.99.2</b>	
2005-07-07	Corrected "Numerical Data" entry under Product
2005-07-07	Released.
<b>0.99.3</b>	
2005-08-03	Added definitions supplied by J. Thieman, C. Harvey and T.King; Significant revision of document as suggested by Joe Hourcle
<b>0.99.4</b>	
2005-08-08	Restructured the taxonomy of elements to match the one suggested by A. Roberts.
2005-08-08	Added definitions for new elements introduced in the new taxonomy.
2005-08-08	Released.
<b>0.99.5</b>	
2005-08-26	Clarified some definitions and corrected typographical errors based on comments from J. Thieman and J. Hourcle.
2005-08-26	Changed data types of "Integer" to "Count" and "Double" to "Numeric".
2005-08-26	Added document elements to product resources.
2005-08-26	Added catalog, display data to top list.
2005-08-26	Included region descriptions from J. King with additions suggested by K. Reardon.
2005-08-26	Add parameters loosely based on a model proposed by A.Roberts.
2005-08-26	Released.
<b>0.99.6</b>	
2005-09-07	Corrected the inclusion of Atmosphere-Ionosphere regions into the Magnetosphere.
2005-09-07	Changed Surface to Ground.
2005-09-07	Removed Body and references to it.
2005-09-07	Added Spherical and Cartesian under Position.
2005-09-07	Remove Ratio (Numerator and Denominator).
2005-09-07	Change Upper Latitude to High Latitude, Lower to Low.
2005-09-07	Introduced "Photon Context" and "Particle Context" as replacements for "Independent Variable".
2005-09-07	Removed "Provider" and "Manufacture" resources and replaced with ID pointers.
<b>0.99.7</b>	
2005-09-08	Under Parameter add Description, Tensor Order.
2005-09-08	Change Photon Context and Particle Context to Independent Variable.
2005-09-08	Move Wavelength and Wave Number under Photon Independent Variable.
2005-09-08	Drop Speed from Particle Independent Variable.
2005-09-08	Move Polar Angle under Particle Independent Variable.
2005-09-08	Add Analysis Method under Field/Electric and

	Field/Magnetic.
2005-09-08	Add Wave Form, Spectra etc. under Analysis Method.
2005-09-08	Add Near 1AU under Heliosphere; Add Body under Atmosphere-Ionosphere, Magnetosphere and Ground.
2005-09-08	Add all planets + Moon under Body.
2005-09-08	Update definition of Magnetotail, etc. to be generic, add Earth examples.
2005-09-08	Change "Acceptable abbreviation" to "Conventional abbreviation" since abbreviations are not supported in the model.
2005-09-08	Released.
<b>0.99.8</b>	
2005-11-03	General clean-up and alignment with the schema agreed upon at the APL meeting (Nov 2-4, 2005)
2005-11-03	Released.
<b>0.99.9</b>	
2005-11-18	Incorporate comments from consortium members on the "final" draft before the release of version 1.0
2005-11-18	Released.
<b>1.0.0</b>	
2005-11-22	Incorporate comments from consortium members on the "final" draft before the release of version 1.0.
2005-11-22	Added Phenomenon Type list and defined terms in the list.
2005-11-22	Released.
<b>1.0.1</b>	
2006-01-03	Changes in value type for elements: Exposure, InputResourceID, RepositoryName, Size.
2006-01-03	Added elements: Pressure.
2006-01-03	Released.
<b>1.0.2</b>	
2006-03-07	Added "Project Scientist" to dictionary and "Role".
2006-03-07	Added "Caveats" under "Instrument".
2006-03-07	Added "Repository" resource class.
2006-03-07	Added "Registry" resource class.
2006-03-07	Released.
<b>1.0.3</b>	
2006-04-27	Added "Earth" as a enumeration with "Magnetosphere" as a member.
2006-04-27	Changed "Observed Region" and "Instrument Region" to enumerations.
2006-04-27	Changed definition of "Item" to indicate it is a value of an enumeration.
2006-04-27	Move "Access Rights" under "Access Information".
2006-04-27	Made "Acknowledgement optional.
2006-04-27	Change "HF Radar" to "Radar".
2006-04-27	Added "NCAR" as a "Format".
2006-04-27	Dropped N, Z, Q from dictionary.
2006-04-27	Moved Mass and Size under "Particle Physical Quantity" and changed to type item.
2006-04-27	Added "Near Earth" under "Heliosphere" and added "Outside Bowshock" and "Orbital" under "Near Earth".
2006-04-27	Changed "Spectral Range Name" to "Spectral Range" for consistency.
2006-04-27	Correct links to "Stoke's Parameters".
2006-04-27	Released.

**1.1.0**

---

2006-08-31	Removed "Orbital".
2006-08-31	Modified definition of "Near Earth".
2006-08-31	Changed "Instrument type" to allow multiple occurrences.
2006-08-31	Made data type of "Mixed" text.
2006-08-31	Added "Service" resource class.
2006-08-31	Updated description of "Resource ID".
2006-08-31	Added MAT_4, MAT_6, MAT_7 and VOTable as a Format.
2006-08-31	Added J2000 as a coordinate system.
2006-08-31	Added Base64 as an Encoding.
2006-08-31	Added Parent ID, Energy Range, Frequency Range, Azimuthal Angle Range, Polar Angle Range, Atomic Number Range, Integral, Differential, Low and High.
2006-08-31	Remove Coordinate System from Particle Physical Parameter.
2006-08-31	Updated Pressure definition.
2006-08-31	Add ObservatoryID under Instrument.
2006-08-31	Remove Observatory ID from Numerical Data and Display Data.
2006-08-31	Changed definition of Investigation Name.
2006-08-31	Remove Access Right from Display Data.
2006-08-31	Change Repository Name to Repository ID under Access Information.
2006-08-31	Added Granule.
2006-08-31	Added Parameter Key under Physical Parameter.
2006-08-31	Add Release Date to Resource Header, Person, and Granule.
2006-08-31	Changed "alias" to "alternate name".
2006-08-31	Removed "Instrument Name" and "Observatory Name".
2006-08-31	Added ChargeState to Particle Quantity.
2006-08-31	Add Field Component container.
2006-08-31	Add Statistics to Phenomenon Type.
2006-08-31	Released.

**1.1.1**

---

Changed InstrumentID and Bin to multiple occurrence.  
 Removed enumeration of Component.  
 Modified definition of Units.  
 Changed AccessURL to type container.

**1.2.0**

---

2007-05-22	Added Aurora and Substorm under Phenomenon Type.
2007-05-22	Added Checksum, Hash Value, Hash Function, MD5 and SHA1, SHA256.
2007-05-22	Added Note as a term and added Note under Timespan.
2007-05-22	Added all planets, Comet and Asteroid as regions.
2007-05-22	Added Data Extent, Bytes and Per to describe the size of a resource.
2007-05-22	Added Data Extent to Access URL and Granule.
2007-05-22	Added the ValidMin, ValidMax and FillValue to Physical Parameter.
2007-05-22	Added Uncertainty and Standard Deviation to qualifiers.
2007-05-22	Added Expiration Date to Resource Header and Granule.
2007-05-22	Added Longitude and Latitude to Orientation.
2007-05-22	Updated Phi and Theta definitions.
2007-05-22	Added Ephemeris as an Instrument Type.
2007-05-22	Added Sequence as a element type and changes Size to a Sequence.
2007-05-22	Defined PriorID and added PriorID to ResourceHeader and Granule.
2007-05-22	Changed InstrumentID in DisplayData and

	NumericalData to one or more occurrences.
2007-05-22	Added Metadata Contact to Role.
2007-05-22	Modified definitions of H, Flux, Integral and Differential.
2007-05-22	Cardinality of Access Information changed from 1 to + (1 or more).
2007-05-22	Added Deputy-PI to Roles; Changed cardinality of Caveats under Instrument to optional.
2007-05-22	Added Element with members of Name, Index, ParameterKey and Component.
2007-05-22	Added Element under Dimension.
2007-05-22	Removed Orientation.
2007-05-22	Made Component and enumeration with the values from Orientation.
2007-05-22	Added InstrumentStatus to MeasurementType.
2007-05-22	Converted Support to an enumeration with Other, Positional and Temporal as members.
2007-05-22	Added ProcessingLevel, Removed Theta and Phi.
2007-05-22	Added Postscript as a Format.
2007-05-22	Added "Extension" as a container.
2007-05-22	Made "URL" in "Granule" multi-valued.
2007-05-22	Changed name of "Date" data type to "DateTime" and "Time" data type to "Duration" to be consistent with conventional terminology.
2007-05-22	Under "Physical Parameter" made "Parameter Key" optional and "Name" required.
2007-05-22	Removed "Dynamic Spectra" from "Measurement Type".
2007-05-22	Added "Spectrum" to "Measurement Type".
2007-05-22	Removed D, H, T, N, Latitude, Longitude from the dictionary.
2007-05-22	Added "Theta" and "Phi" to "Component".
2007-05-22	Added Location container under Observatory and added the elements Latitude, Longitude, Elevation, ObservatoryGroup.
2007-05-22	Added ITM regions under Near Surface.
2007-05-22	Remove Instrument Region from NumericalData.
2007-05-22	Added WGS84 as a Coordinate System Name.
2007-05-22	Released.

### 1.2.1

2008-03-20	Added SpacecraftOrbitPlane to CoordinateSystemName.
2008-03-20	Added Parallel and PhaseAngle to FieldQualifier.
2008-03-20	Added Current, GyroFrequency, Energy, PlasmaFrequency to the appropriate ParticleQuantity, FieldQuantity, or PhotonQuantity.
2008-03-20	Added Characteristic to ParticleQualifier.
2008-03-20	Add EnergyRange and WavelengthRange to PhotonQuantity.
2008-03-20	Added White-light, H-alpha, He-10830, Ca-K, Na-D, Extreme Ultraviolet, Ni-6768, K-7699 to dictionary and to SpectralRange.
2008-03-20	Added Time Of Flight Interferometer, Photometer, Radiometer, Coronagraph, ProportionalCounter, ScintillationDetector, Photopolarimeter, Geiger-MuellerTube, NeutralParticleDetector, Sounder, NeutralAtomImager, RetardingPotentialAnalyser, MultispectralImager, ImagingSpectrometer, Riometer, Unspecified to Instrument Type.
2008-03-20	Added Archive Specialist to Role.
2008-03-20	Added Flow Speed, Number Flux to Particle Quantity.
2008-03-20	Added Energy Flux to Particle Quantity and Photon Quantity.
2008-03-20	Added Anisotropy to Particle Qualifier.
2008-03-20	Added Carrington and HCI to Coordinate System.

2008-03-20 Updated definitions of Vector and Size.  
 2008-03-20 Removed Flux and Intensity.  
 2008-03-20 Released.

### 1.2.2

2008-07-31 Change "Plasmafrequency" to "Plasma Frequency".  
 2008-07-31 Change "Plasmafrequency" to "Plasma Frequency".  
 2008-07-31 Change "Retarding Potential Analyser" to "Retarding Potential Analyzer"  
 2008-07-31 Change "Time-of-flight" to "Time of flight".  
 2008-07-31 Change "Observatory Group" to "Observatory Name".  
 2008-07-31 Removed "Offline" from "Medium".  
 2008-07-31 Remove "Field Component" from lists.  
 2008-07-31 Remove "Near Earth" as a list.  
 2008-07-31 Added "Ionosphere" as a list.  
 2008-07-31 Azimuthal Angle, Dayside, Electric Field Instrument, Frequency, High Latitude, Low Latitude, Nightside, Polar Angle, Provider ID, Provider Release Date, RTF, SGI, Soft X-rays, Spatial Range, TeX, Wavelength, Wavenumber, XDR  
 2008-07-31 Added Repository ID and Stop Date  
 2008-08-14 Released.

### 1.3.0

2007 Add WavelengthRange to dictionary; Add BandName to Bin.  
 2007 Added SupportQuantity to Support.  
 2007 Moved Extension into each resource class.  
 2007 Add SpectralRange to EnergyRange, FrequencyRange and WavelengthRange.  
 2007 Added Units, UnitsConversion, ValidMin, ValidMax, FillValue to Element  
 2007 Added Fax Number to Person.  
 2007 Added Contributor and Publisher to dictionary and Role.  
 2007 Added Language to dictionary.  
 2008 Introduced Document resource.  
 2008 Added Document Type enumeration and Paper as an item.  
 2008 Added Number Flux to Particle Quantity.  
 2008 Moved CrossSpectrum from FieldQuantity to FieldQualifier.  
 2008 Added Electromagnetic to FieldQuantity.  
 2008 Added PhysicalParameter to Catalog and DisplayData.  
 2008-04-24 Removed "Structure Type" from dictionary and Structure.  
 2008-04-24 Removed "Observatory Group" from dictionary and Observatory.  
 2008-04-25 Removed "Provider Release Date" from dictionary.  
 2008-05-20 Added "Magnetic Cloud" to dictionary and "Phenomenon Type"  
 2008-05-20 Changed cardinality of "Phenomenon Type" to + in Catalog.  
 2008-04-24 Restored "Observatory Group" and made it multiple occurrence.  
 2008-05-22 Added "TAR" to the dictionary and to "Encoding Type".  
 2008-05-22 Made "Encoding Type" multiple occurrence (\*) in "Access Information".  
 2008-05-22 Changed "End Date" to "Stop Date" and "Relative End Date" to "Relative Stop Date".  
 2008-05-22 Added "Active Region" to dictionary and "Phenomenon Type".  
 2008-05-22 Added "Coronal Hole" to dictionary and "Phenomenon Type".

2008-05-22	Added "Radio Burst" to dictionary and "Phenomenon Type".
2008-05-22	Added "EIT Waves" to dictionary and "Phenomenon Type".
2008-05-22	Fixed spelling of "Plasma Frequency" in the "Photon Qualifier" list.
2008-05-22	Removed "Array" from the Field, Photon and Particle qualifier lists.

### 1.3.1

2008-07-21	Updated description of duration type.
2008-07-31	Added "Set" to "Physical Parameter"
2008-07-31	Added "Source" dictionary and to "Granule", Removed URL, Checksum and Data Extent from Granule (now in Source)
2008-07-31	Added "Source Type" as a list with possible values of Data, Layout, Ancillary, Browse and Thumbnail.
2008-07-31	Added "Qualifier" as a unified list of all qualifiers. Removed "Field Qualifier", "Photon Qualifier" and "Particle Qualifier" from the dictionary. Replaced each with "Qualifier" in the ontology. Added "Qualifier" to "Support"
2008-07-31	Added "Trace" to the dictionary and to the "Qualifier" list.
2008-07-31	Added "Ion Drift" and "Dust Detector" to the dictionary and to the "Instrument Type" list.
2008-07-31	Added "Platform" to the dictionary and to the "Instrument Type" list, remove "Ephemeris" from the "Instrument Type" list.
2008-09-04	Added "Rendering Hints" with elements Format, AxisLabel, DisplayType, ScaleMin, ScaleMax, ScaleType and related enumerated values.
2008-09-04	Added "Symmetric" to the dictionary and to Qualifier.
2008-09-04	Changed "Physical Parameter" to "Parameter".
2008-09-04	Removed "Measured" and shifted containers under "Measured" up one level.
2008-09-04	Added "Velocity" to "Support Quantity".
2008-09-04	Added "Count Rate" to the dictionary and to "Particle Quantity".

### 1.3.2

2008-10-07	Removed "Charged Particle Flux" from Measurement Type and the dictionary.
2008-10-07	Added "Interstellar" to dictionary and Region.
2008-10-15	Changed "Format" under "Rendering Hints" to "Value Format" to eliminate name conflict with "Format".

### 1.3.3

2008-10-16	Added the "Association" container and "Association Type" enumeration to the dictionary. Modified the ontology to replace "Association Type" with the new "Association" container.
------------	---

### 1.3.4

2009-01-14	Added "Wave", "Passive" and "Active" to the dictionary. Added "Wave" as an enumeration. Remove "Radio and Plasma Waves" and "Radio Soundings" from the "Measurement Type" enumeration and added "Wave" to the enumeration.
2009-01-14	Added "Linear Scale" and "Log Scale" to the dictionary. Removed "Log" from the dictionary. Modified the definition of "Linear" to remove reference scaled related usage. Updated the "Scale" enumeration with the name

	changes.
2009-01-14	Added "Language" under "Information URL".
2009-01-14	Changed the definition of "Text" and converted "Text" to an enumeration with possible encoding types.
2009-01-14	Modified "Component" to consist of "I", "J", "K". Added "Direction Angle", and "Projection" to "Qualifier". Removed "R", "Theta", "Phi", "X", "Y", and "Z". Added "Direction Angle" as an enumeration with values of "Azimuth Angle", "Polar Angle" and "Elevation Angle". Added "Projection" as an enumeration with value of "IJ", "IK", and "JK".
2009-01-22	Modified definition of "Mixed"
2009-01-22	Changed occurrence of "Particle" to one or more.
2009-01-23	Added "Ion Chamber" to dictionary and "Instrument Type" list.
2009-02-05	Added (restored) "Intensity" to dictionary and "Photon Quantity" list.
2009-02-05	Changed "Line-of-sight" to "Line Of Sight".
2009-02-05	Added "Psuedo" and "Column" to the dictionary and to "Qualifier" list.
2009-02-26	Added "Annotation" resource and "Annotation Type" and "Confidence Rating" enumerations. The terms "Anomaly", "Event", "Feature", "Probable", "Good", "High" were added to support the new enumerations.
2009-02-27	Change "Wave" to "Waves".

### 1.3.5

2009-03-25	Updated definitions for "Numeric" and "Text" data types.
2009-03-26	Changed "Mixed" to a container with "Qualifier" and "Mixed Quantity" as attributes. Added "Mixed Quantity" enumeration with allowed values of "Alfven Mach Number", "Other", "Plasma Beta", "Thermal Pressure", "Alfven Velocity", "Magnetosonic Mach Number", "Plasma Beta", and "Plasma Frequency-To-Gyrofrequency Ratio".
2009-03-26	Added "Access URL" to "Repository" and "Registry".
2009-03-26	Added "Image URL" to "Annotation" and dictionary
2009-03-26	Various editorial updates to definitions, spelling and typos
2009-03-26	Added "Plasmagram", "Spectrogram" and "Wave Form" to the dictionary and to the "Display Type" list.
2009-03-26	Changed the name of "Photon" to "Waves" and "PhotonQuantity" to "WaveQuantity". Added "Wave Type" with values of "Electromagnetic", "Electrostatic", "Photon", "Plasma Waves", "Hydrodynamic", and "MHD".
2009-03-26	Updated definitions of "Emissivity", "Equivalent Width", "Gyrofrequency", "Intensity", "Line Depth", "Plasma Frequency", "Poynting Flux". Added "Wave Type" with values of "Electromagnetic", "Electrostatic", "Photon", "Plasma Waves", "Hydrodynamic", and "MHD".
2009-03-26	Added "Absorption", "AC-Electric Field", "AC-Magnetic Field", "Doppler Frequency", "Frequency", "Propagation Time", and "Wavelength" to dictionary and "Wave Quantity". Added "Wave Type" with values of "Electromagnetic", "Electrostatic", "Photon", "Plasma Waves", "Hydrodynamic", and "MHD".
2009-03-26	Added "Far Ultraviolet", "HE-304", "LBH Band" and "Soft X-Rays" to dictionary and "Spectral Range".
2009-04-06	Removed "Spectral Range" from under "Energy Range".

### 1.3.6

2009-04-09	Added "Atom" and "Neutron" to "Particle Type".
------------	--

2009-04-09	Added "Array" and "Total" to "Qualifier".
2009-04-09	Added "Particle Type" to "Mixed".
2009-04-09	Added "Unlikely" and "Weak" to the dictionary and modified "Confidence Rating" to have values "Unlikely", "Weak", "Probable", and "Strong".
2009-04-09	Added "Classification Method" as an enumeration with allowed values of "Automatic", "Inspection", and "Inferred". Added "Classification Method" to "Annotation".
2009-04-09	Added "Observation Extent" with attributes of "Observed Region", "Start Location", "Stop Location" and "Note".
2009-04-09	Added "Observation Extent" to "Annotation".
2009-04-09	Added "Child Event Of" and "Observed By" to "Association Type".
2009-04-09	Added "Area", "Bandwidth" and "Solid Angle" to "Integral", added "Field-Aligned", "Group", "Perturbation", "Phase" and "Spectral" to "Qualifier".

## 2.0.0

2009-04-15 Released.

## 2.0.1

2009-07-12	Changed "Rendering Hints" to 0-to-many occurrence.
2009-07-12	Under "Element" replaced "Component" with "Qualifier" and allow multiple occurrences.
2009-07-12	Update the description of "Index" data type to explain wild cards.
2009-07-12	Added "Sound Speed" to dictionary and to "Particle Quantity".
2009-07-12	Updates to the definition "Access URL", "Data Extent", "Polar" and "Sonic Mach Number".

## 2.0.2

2009-09-24	Added "Atomic Number Detected", "Mass Number" and "Charge State" to dictionary and to "Particle Quantity" enumeration. Also added "Direction Angle" to "Particle Quantity".
2009-10-08	Added "Arrival Direction" to dictionary and to "Particle Quantity" enumeration. Added "Instrument Mode" to dictionary and "Support Quantity". Updated definitions of "Charge State" and "Atomic Number Detected".
2009-11-05	Added "Stream Interaction Region" to dictionary and to "Phenomenon Type" enumeration. Updated definition of "Coronal Mass Ejection".
2009-11-18	Modified definitions for "Observatory" and "Instrument".

## 2.0.3

2010-02-04	Added "Former-PI" to dictionary and to "Role" enumeration; Added "Note" to "Person".
2010-03-19	Updated definitions for "Number Flux", "Energy Flux", "Differential", and "Integral"; Added "Dust" to "Measurement Type" enumeration;

## 2.1.0

2010-03-19 Released.

## 2.2.0

2010-04-15	Added "Hardcopy" as an enumeration to dictionary and to "Format"; Added "Film", "Photographic Plate", "Photograph", "Microfiche", "Microfilm", "Print" to dictionary and to "Hardcopy" enumeration; Changed "Observatory Group" to "Observatory Group ID";
------------	--

	Updated definition of "Observatory" to make it more suitable for creation of conceptual Observatories.; Added "Operating Span" to dictionary with elements "Start Date", "Stop Date" and "Note"; Added "Operating Span" to "Instrument" and "Observatory".;
2010-05-21	Added "Heliosheath" to dictionary and to "Heliosphere" enumeration;
2010-06-25	Added "Fluence" to dictionary and "Particle Quantity"; Updated definitions for "Number Flux", "Coordinate System" and "Counts"; Added "HCC" (Heliocentric Cartesian), "HCR" (Heliocentric Radial), HPC (Helioprojective Cartesian) and "HPR" (Helioprojective Radial) to dictionary and "Coordinate System Name"
2010-08-17	Added "S3_BUCKET" to dictionary and "Encoding"; Add "Directional" to dictionary and to "Qualifier";
2010-08-20	updated definition for "Energy Flux" and "Differential"
2010-09-15	Updated definitions of "Outer", "Inner", "Heliosheath" and "Remote 1AU"
2010-09-17	Added "Excel" to dictionary and to "Format" list; Added "Rendering Axis", and "Index" to dictionary and under "Rendering Hints"; Add "Vertical", "Horizontal", and "Color Bar" to dictionary and to the "Rendering Hints" enumeration; Changed cardinality of "Investigation Name" from 1 to +; Add "Median, " Maximum" and "Minimum" to dictionary and to "Qualifer" list.;
2010-09-17	Added "SSE_L" to dictionary and to "Coordinate System Name" list;
2011-01-06	Updated definition for "irradence".
2011-01-06	Released.

### 2.2.1

2011-05-12	Strike "product" from the definition of "Numerical Data".;
2011-06-16	Added "core", "halo", "strahl" and "superhalo" to the dictionary and to "Qualifier";
2011-08-18	Released.

### 2.2.2

2011-09-26	Add "Rendering Hints" under "Element"; Set occurrence for "Coordinate Representation" and "Coordinate System Name" under "Coordinate Sytem" to required (1); Set "Size" under "Structure" to required (1); Set "Association ID" and "Association Type" under "Association" to required (1).
2011-10-27	Update definition of "Document"; Add "MIME Type" to dictionary and "Document" structure; Add "Presentation", "Poster", "White Paper", "Technical Note", "Specification" and "Report" to dictionary and to "Document Type" enumeration; Remove "Paper" from dictionary.
2012-02-02	Add "Sector Boundary Crossing" to the dictionary and the "Phenomenon Type" list.; Add "Product Key" to the dictionary and under "Access Information";
2012-02-27	Add "Albedo" to the dictionary and to "Wave Quantity" list.; Add "Partical Radius" to the dictionary and to the "Particle Quantity" list;
2012-02-27	Released.

### 2.2.3

2012-03-15	Modified definition of "Numerical Data" as suggested by R. Weigel and D.A. Roberts; Modified definition of "Potential" as suggested by F. Mozer, D.A. Roberts and S. Fung; Add "Magnetograph" to dictionary and
------------	---

2012-05-10	"Instrument Type" as suggested by J. King Modified definitions of "GEI", "Azimuth Angle", "Elevation Angle" and "Polar Angle" as suggested by J. Merka; Add definition for "ENP and add to "Coordinate System Name" enumeration as suggested by J. Merka; Add definitions of "Photomultiplier Tube" and "Solid State Detector" to dictionary and "Instrument Type" as suggested by B. Weigel.
2012-05-24	Add definition of "Moon" and add to "Earth" enumeration as suggested by T. Narock.
2014-05-22	Released.

**2.2.4**

2015-05-28	Add coordinate systems MSO, VSO, KSO, KSM, JSO, JSM to dictionary and CoordinateSystemName, Add SolarUVFlux and IMFClockAngle to dictionary and MixedQuantity.
2015-05-31	Released.

**2.2.5**

2015-06-12	Add moons and magnetosphere to planets. Only the larger moons which are typically encountered or simulated were added.
2015-06-12	Add coordinate systems to enumeration.

**2.2.6**

2015-09-09	Released.
------------	-----------

**2.2.7**

2016-07-21	Change occurrence of Particle->ParticleType from + to * and Wave->WaveType from 1 to 0.
2016-07-21	Add JSON and CSV to the dictionary and to Format enumeration.

**2.2.8**

2016-07-21	Released.
------------	-----------

**2.2.9**

2017-02-09	Add CadenceMin, CadenceMax, ExposureMin, ExposureMax, PartiallyRestricted, Confidence, ProviderName, MassRange, PitchAngleRange; Change occurrence of Observatory/OperatingSpan from 1 to +.
2017-09-07	Add HGRTN, HERTN to dictionary and to CoordinateSystemName. Add Entropy to dictionary and ParticleQuantity.
2017-11-14	Released.

**2.2.10**

2018-02-08	Add DOI to dictionary and to ResourceHeader.
------------	--
